**Headland-bay Beaches: Static Equilibrium Concept For Shoreline Management** Rong-chung John Hsu, Jung Lyul Lee, Antonio Henrique Da Fontoura Klein, Mauricio Gonzalez, Raul Medina, 2021-06-22 Headland bay beaches HBBs are ubiquitous in coastal environment They exist around the world naturally or artificially as byproduct of engineering project Though in various shapes sizes and stability a HBB in static equilibrium not only is a delight for visitors but also offers hope for better beach protection restoration recreation and shoreline management With an empirical parabolic model now available the stability of an existing HBB can be verified the future bay shape downdrift of a harbor can be predefined and a stable HBB can be designed Although a plethora of books are available for coastal and ocean engineering and geomorphology only a countable few have covered engineering applications of HBBs On the contrary this book with focus on the HBBs in static equilibrium aims to offer a comprehensive volume with knowledge and applications for coastal scientists engineers managers students and the general public interested in HBBs Useful software tools for HBBs MEPBAY MeePaSoL and SMC are introduced in the book to aid in applications The authors have set out to make this book the first unique publication on HBBs by bringing together the old coastal geomorphic knowledge and new concepts for static bay beaches This book also provides numerous examples using the static bay beach concept to assist coastal scientists and engineers on planning and pre design of a stable HBB and for experimentalists consultants and numerical modelers to alleviate the burden of comparing planning options and conducting laborious physical experiments on

coastal sedimentation problems      Computational Modelling in Hydraulic and Coastal Engineering Christopher Koutitas, Panagiotis D. Scarlatos, 2015-12-02 Computational simulation methods have a range of applications in hydraulic and coastal engineering This textbook provides an introductory but comprehensive coverage of these methods It emphasizes the finite differences method with applications in reservoir management closed conduit hydraulics free surface channel flows surface gravity waves groundwater movement and mass transport processes It focuses on applications rather than lengthy theories or derivations of complex formulas and is supported by a wealth of hands on numerical examples PowerPoint presentations learning assignment projects and quizzes      *National Economic Development Procedures Manual* L. Leigh Skaggs, Frank L. McDonald, 1991      *Mathematical Models in Coastal Engineering* Christopher G. Koutitas, 1988 The book provides a basic methodology for the formulation and numerical solution of mathematical models in coastal engineering First the mathematical theory of waves is considered the coastal circulation due to various generating factors such as tide wind density variation and waves finally pollutant advective diffusion and sediment transport in the surf zone and wider coastal domain The book contains numerous illustrative worked examples with the corresponding computer listings in BASIC The book will enable engineering consultants researchers and postgraduate students in coastal engineering and oceanography to apply the sophisticated techniques used in major coastal engineering works to small scale design using microcomputers
