Cranes Andrzej Maczynski,2014-11-01 The monograph deals with selected issues associated with steering of working  
movements of the jib cranes Three methods of final positioning of the cargo crane in the slewing of the upper structure have  
been proposed They vary not only with the algorithm and the structure of the control system but also with the required  
measurement equipment In case of cranes founded on the moveable base in particular the offshore cranes the problem of  
stabilization of the cargo position is important A way to solve this problem is presented in the book It assumes the  
simultaneous use of drives drum winch and special auxiliary system The work contains description of the crane models the  
basic one taking into account flexibilities and damping in the selected subsystems its modifications and simplified models  
used in the optimization tasks The results of the indirect verification of the basic model are also presented A physical model  
of the rotary crane has been used to carry out experimental verification of one of the methods of final cargo positioning
