Sikos,Paul Haskell-Dowland,2023-05-15 This book collects state of the art curriculum development considerations training methods techniques and best practices as well as cybersecurity lab requirements and aspects to take into account when setting up new labs all based on hands on experience in teaching cybersecurity in higher education In parallel with the increasing number and impact of cyberattacks there is a growing demand for cybersecurity courses in higher education More and more educational institutions offer cybersecurity courses which come with unique and constantly evolving challenges not known in other disciplines For example step by step guides may not work for some of the students if the configuration of a computing environment is not identical or similar enough to the one the workshop material is based on which can be a huge problem for blended and online delivery modes Using nested virtualization in a cloud infrastructure might not be authentic for all kinds of exercises because some of its characteristics can be vastly different from an enterprise network environment that would be the most important to demonstrate to students The availability of cybersecurity datasets for training and educational purposes can be limited and the publicly available datasets might not suit a large share of training materials because they are often excessively documented but not only by authoritative websites which render these inappropriate for assignments and can be misleading for online students following training workshops and looking for online resources about datasets such as the Boss of the SOC BOTS datasets The constant changes of Kali Linux make it necessary to regularly update training materials because commands might not run the same way they did a couple of months ago The many challenges of cybersecurity education are further complicated by the continuous evolution of networking and cloud computing hardware and software which shapes student expectations what is acceptable and respected today might be obsolete or even laughable tomorrow Business Analysis Done Right Karolina Zmitrowicz,2024-10-22 This book presents observations experiences and practices that work or don t work in different areas of business analysis combining the lessons learned with how to avoid potential pitfalls Four areas were identified that constitute the greatest project challenges and the most frequently occurring problems in the work of a business analyst strategic analysis business analysis process planning requirements engineering and solution implementation These areas hence build the main chapters of this book Each of them begins with a brief introduction explaining the essence of the respective area and presenting the most important information They are further divided into sections describing specific topics where tips and recommendations are presented Most

sections begin with a guiding thought a quote provided by an expert or a short hint based on the author s 20 years of experience At the end of each chapter case studies and or checklists are provided facilitating the planning and implementation of business analysis practice in a project This book provides readers with suggestions ideas and conclusions regarding selected aspects of business analysis in particular discussing challenges and recommendations regarding the application of specific methods practices in specific usage contexts It will be most beneficial to professionals who already have a basic understanding of the fundamentals of business analysis and will be able to relate theoretical knowledge to practical examples of project applications Readers who are just entering the field of business analysis will also benefit by gaining insights how to avoid basic mistakes or risks
