**Abstract:** In the present paper, we propose a new generalized Lindley distribution, which generalizes the Lindley distribution and many extensions and generalization of it as proposed by various authors and researchers in recent years. Various properties of the generalized Lindley distribution are provided. We have also investigated the characterization of the generalized Lindley distribution by first truncated moment. The characterizations by order statistics and upper record values have also been investigated.

**Keywords:** Characterization, Generalized Lindley distribution, truncated moments

## 1 Introduction

Modeling and analyzing of real lifetime data play very important roles in many fields of research such as biology, computer science, control theory, economics, engineering, genetics, hydrology, medicine, number theory, statistics, physics, psychology, reliability, risk management, etc., among others. The Lindley distribution is one of the most important continuous probability distributions, and has been extensively studied and widely used by many researchers in the fields of probability, statistics and other applied sciences since it was introduced as a mixture of exponential and gamma distributions by Lindley in 1958 in the context of Bayesian statistics, as a counter example to fiducial statistics and because of its superiority over exponential distribution; see [1, 2]. In the present paper, we propose a new generalized Lindley distribution (GLD), which generalizes the Lindley 1958 distribution and many extension and generalization of Lindley distribution as proposed by various authors and researchers in recent years, among them, [3, 4, 5, 6, 7, 8, 9, 10, 11, 12, 13] and [14, 15] are notable.

The organization of the paper is as follows. In Section 2, we introduce the proposed generalized Lindley distribution (GLD), and discuss its various distributional properties. In Section 3, we provide the characterizations of our proposed generalized Lindley distribution. Some concluding remarks are given in Section 4.

## 2 The Proposed Generalized Lindley Distribution

In this section, we introduce our proposed generalized Lindley distribution, and discuss its various distributional properties, which are described below.

### 2.1 Probability Density, Cumulative Distribution and Hazard Rate Functions:

For a positive continuous random variable  $X$  with scale parameter  $\theta > 0$  and shape parameters  $\alpha, \beta, \gamma, \lambda > 0$ , we define its probability density function (pdf) by

$$f(x, \alpha, \beta, \gamma, \lambda, \theta) = c\theta^{\alpha+1} x^{\alpha-1} (\beta + \gamma x^\lambda) e^{-\theta x}, \quad x, \alpha, \beta, \gamma, \lambda, \theta > 0, \quad (2.1)$$
