Did you know that research has found a link between inflammation and increased risk for chronic diseases? And these studies suggest that heart disease, Type 2 diabetes and obesity might be due to chronic inflammation. Inflammation is a Normal Body Response to Promote Healing. Inflammation is a sign that the immune system is fighting infection. The infection may be related to germs, wounds, allergens, toxins or other causes. Typically we think of signs of inflammation as redness, swelling and pain. But sometimes inflammation can happen within our bodies. Excess body fat may promote changes in the body cells that promote chronic inflammation. The signs of inflammation may not be obvious. For others, chronic inflammation may relate to a problem with their immune system. Whatever the cause, long-term chronic inflammation may damage the body's DNA, increasing the risk for cancer. The Anti-Inflammation diet is a great way to reduce the effects of inflammation on the body as well as reducing the risk of many diseases and medical conditions that contribute to inflammation.
