Data-Driven Evolutionary Modeling in Materials Technology

Nirupam Chakraborti, 2022-09-15 Due to efficacy and optimization potential of genetic and evolutionary algorithms they are used in learning and modeling especially with the advent of big data related problems This book presents the algorithms and

strategies specifically associated with pertinent issues in materials science domain It discusses the procedures for evolutionary multi objective optimization of objective functions created through these procedures and introduces available codes Recent applications ranging from primary metal production to materials design are covered It also describes hybrid modeling strategy and other common modeling and simulation strategies like molecular dynamics cellular automata etc Features Focuses on data driven evolutionary modeling and optimization including evolutionary deep learning Include details on both algorithms and their applications in materials science and technology Discusses hybrid data driven modeling that couples evolutionary algorithms with generic computing strategies Thoroughly discusses applications of pertinent strategies in metallurgy and materials Provides overview of the major single and multi objective evolutionary algorithms This book aims at Researchers Professionals and Graduate students in Materials Science Data Driven Engineering Metallurgical Engineering Computational Materials Science Structural Materials and Functional Materials **Design by Evolution** Philip F.

Hingston, Luigi C. Barone, Zbigniew Michalewicz, 2008-09-30 Evolution is Nature s design process The natural world is full of wonderful examples of its successes from engineering design feats such as powered flight to the design of complex optical systems such as the mammalian eye to the merely stunningly beautiful designs of orchids or birds of paradise With increasing computational power we are now able to simulate this process with greater fidelity combining complex simulations with high performance evolutionary algorithms to tackle problems that used to be impractical This book showcases the state of the art in evolutionary algorithms for design The chapters are organized by experts in the following fields evolutionary design and intelligent design in biology art computational embryogeny and engineering The book will be of interest to researchers practitioners and graduate students in natural computing engineering design biology and the creative arts Intelligent Information Processing II Qing He, 2006-01-20 Data Mining is the process of posing queries and extracting useful information patterns and trends previously unknown from large quantities of data Thu 00 It is the process where intelligent tools are applied in order to extract data patterns JM 01 This encompasses a number of different technical approaches such as cluster analysis learning classification and association rules and finding dependencies Agents are defined as software entities that perform some set of tasks on behalf of users with some degree of autonomy This research work deals about developing a automated data mining system which encompasses the familiar data mining algorithms using intelligent agents in object oriented databases and proposing a framework Because the data mining system uses the intelligent agents a new user will be able to interact with the data mining system without much data mining technical knowledge This system will automatically select the appropriate data mining technique and select the necessary field needed from the database at the appropriate time without expecting the users to specify the specific technique and the parameters Also a new framework is proposed for incorporating intelligent agents with automated data mining One of the major goals in developing this system is to give the control to the computer for learning automatically by using intelligent agents

Multi-Objective Optimization using Evolutionary Algorithms Kalyanmoy Deb,2001-07-05 Evolutionary algorithms are relatively new but very powerful techniques used to find solutions to many real world search and optimization problems Many of these problems have multiple objectives which leads to the need to obtain a set of optimal solutions known as effective solutions It has been found that using evolutionary algorithms is a highly effective way of finding multiple effective solutions in a single simulation run Comprehensive coverage of this growing area of research Carefully introduces each algorithm with examples and in depth discussion Includes many applications to real world problems including engineering design and scheduling Includes discussion of advanced topics and future research Can be used as a course text or for self study Accessible to those with limited knowledge of classical multi objective optimization and evolutionary algorithms The integrated presentation of theory algorithms and examples will benefit those working and researching in the areas of optimization optimal design and evolutionary computing This text provides an excellent introduction to the use of evolutionary algorithms in multi objective optimization allowing use as a graduate course text or for self study

Applications of Multi-objective Evolutionary Algorithms Carlos A. Coello Coello,Gary B. Lamont,2004 This book presents an extensive variety of multi objective problems across diverse disciplines along with statistical solutions using multi objective evolutionary algorithms MOEAs The topics discussed serve to promote a wider understanding as well as the use of MOEAs the aim being to find good solutions for high dimensional real world design applications The book contains a large collection of MOEA applications from many researchers and thus provides the practitioner with detailed algorithmic direction to achieve good results in their selected problem domain
