the prior literature with a child centered view of search reveals that children have been remarkably consistent over time as searchers displaying the same search strategies regardless of the landscape of search However no research has synthesized these consistent patterns in children s search across the literature and only recently have these patterns been uncovered as distinct search roles or searcher types Based on a four year longitudinal study on children s search experiences this book weaves together the disparate evidence in the literature through the use of 9 search roles for children ages 7 15 The search role framework has a distinct advantage because it encourages adult stakeholders to design children s search tools to support and educate children at their existing levels of search strength and deficit rather than expecting children to adapt to a transient search landscape
