Introduction to Scientific Visualization Helen Wright, 2007-08-03

AboutThisBook This book was first suggested to Springer in 2004 though its origins go back to changes made two years earlier to the structure of the University of Hull's Computer Science programme At the same time my own visualization search was leading towards a systematic view of data and techniques that I felt could be educationally valuable In 2003 I thus sat down with some trepidation to write a visualization course founded on research in the area but nonetheless accessible to students This course could however involve no mathematics beyond GCSE in line with university admissions practices of that time Writing the course involved generating many new illustrations in the form of both line drawings and visualization screenshots and wishing to get maximum mileage out of this effort the idea of writing a book to accompany the course came about At the University of Hull our practical visualization teaching is based on IRIS Explorer an application builder type package from NAG Ltd Originally this book was to have been both an introduction to visualization and a handbook for beginners in IRIS Explorer with virtual laboratories running throughout it to illustrate certain points Following comments from reviewers

however its emphasis has changed *In Silico* Jason Sharpe, Charles John Lumsden, Nicholas Woolridge, 2008-07-01 *In Silico* introduces Maya programming into one of the most fascinating application areas of 3D graphics biological visualization In five building block tutorials this book prepares animators to work with visualization problems in cell biology The book assumes no deep knowledge of cell biology or 3D graphics programming An accompanying DVD ROM includes code derived from the tutorials the working Maya computer files and sample animated movies Teaches artists and scientists to create realistic digital images of humans and nature with the popular CG program Maya This self contained study guide includes background foundations and practice Step by step example programs and end result demonstrations help readers develop their own portfolios Gorgeous four color screen shots throughout
