Computing In Euclidean Geometry:

Computing in Euclidean Geometry Ding-Zhu Du,Frank Hwang,1995 This book is a collection of surveys and exploratory articles about recent developments in the field of computational Euclidean geometry Topics covered include the history of Euclidean geometry Voronoi diagrams randomized geometric algorithms computational algebra triangulations machine proofs topological designs finite element mesh computer aided geometric designs and Steiner trees This second edition contains three new surveys covering geometric constraint solving computational geometry and the exact computation paradigm   Introduction to Geometric Computing Sherif Ghali,2008-07-05 Computing is quickly making much of geometry intriguing not only for philosophers and mathematicians but also for scientists and engineers What is the core set of topics that a practitioner needs to study before embarking on the design and implementation of a geometric system in a specialized discipline This book attempts to find the answer Every programmer tackling a geometric computing problem encounters design decisions that need to be solved This book reviews the geometric theory then applies it in an attempt to find that elusive right design   **Computational Geometry on Surfaces** Clara I. Grima,Alberto Márquez,2013-06-29 In the last thirty years Computational Geometry has emerged as a new discipline from the field of design and analysis of algorithms That dis cipline studies geometric problems from a computational point of view and it has attracted enormous research interest But that interest is mostly concerned with Euclidean Geometry mainly the plane or Eu clidean 3 dimensional space Of course there are some important rea sons for this occurrence since the first applieations and the bases of all developments are in the plane or in 3 dimensional space But we can find also some exceptions and so Voronoi diagrams on the sphere cylin der the cone and the torus have been considered previously and there are manY works on triangulations on the sphere and other surfaces The exceptions mentioned in the last paragraph have appeared to try to answer some quest ions which arise in the growing list of areas in which the results of Computational Geometry are applicable since in practiee many situations in those areas lead to problems of Com putational Geometry on surfaces probably the sphere and the cylinder are the most common examples We can mention here some specific areas in which these situations happen as engineering computer aided design manufacturing geographie information systems operations re search roboties computer graphics solid modeling etc
