Rigorously reviewed this book provides a number of useful methods and a unique practical perspective on settlement calculation of high rise buildings It covers soft soil constitutive model and computation parameters the theory of soil stress and strain and new methods of settlement calculation in super long pile and space varying rigidity group piles box raft pile box raft diaphragm wall pile box raft and rock foundation on high rise buildings This book is a useful design and construction resource for scientists and engineers as well as for professionals in structural mechanics and geotechnical engineering Professor Xiangfu Chen is chairman of the Academic Commission of China State Construction Engineering Corporation CSCEC chief engineer of China Construction Beijing Design and Research Institute and a Doctoral Tutor at Tongji University Shanghai

Construction Graphics Keith A. Bisharat, 2025-03-18 Learn how managers of the construction process use construction graphics to analyze evaluate and organize the labor equipment and materials required to fulfill the design professionals instructions regarding a project Construction drawings are in their essence a set of goals the graphic and written instructions provided by architects and engineers to construction professionals that adequately manifest the outcomes sought for a project Construction professionals translate those instructions into discreet processes and sequences of work to which values in both time and money can be attributed Construction Graphics has long stood as the essential treatment of this subject from the constructor s point of view Now updated from the second edition the third edition reflects advances in technology and project delivery systems and offers an analysis of how the ideas discussed throughout the text might be applied in the context of one system in a commercial building Construction Graphics continues to be an indispensable volume for anyone managing construction work Readers of the third edition of Construction Graphics will also find Enhanced treatment of technology as it operates in construction project delivery and the relationship between design professionals and builders Exercises at the end of each chapter with detailed answers in a helpful appendix Illustrations and figures throughout to emphasize key concepts Construction Graphics is ideal for students in construction management construction engineering architecture architectural engineering project management and interior design programs in community college and four year university programs

Effective Shoulder Design and Maintenance , 2007 Granular shoulders are an important element of the transportation system and are constantly subjected to performance problems due to wind and water induced erosion rutting edge drop off and slope irregularities Such problems can directly affect drivers safety and often require regular maintenance The present research study was undertaken to investigate the factors

contributing to these performance problems and to propose new ideas to design and maintain granular shoulders while keeping ownership costs low This report includes observations made during a field reconnaissance study findings from an effort to stabilize the granular and subgrade layer at six shoulder test sections and the results of a laboratory box study where a shoulder section overlying a soft foundation layer was simulated Based on the research described in this report the following changes are proposed to the construction and maintenance methods for granular shoulders A minimum CBR value for the granular and subgrade layer should be selected to alleviate edge drop off and rutting formation For those constructing new shoulder sections the design charts provided in this report can also be used to predict the behavior of existing shoulders In the case of existing shoulder sections overlying soft foundations the use of geogrid or fly ash stabilization proved to be an effective technique for mitigating shoulder rutting
