Information Granularity, Big Data, and Computational Intelligence Witold Pedrycz,Shyi-Ming Chen,2014-07-14 The recent pursuits emerging in the realm of big data processing interpretation collection and organization have emerged in

numerous sectors including business industry and government organizations Data sets such as customer transactions for a mega retailer weather monitoring intelligence gathering quickly outpace the capacities of traditional techniques and tools of data analysis The 3V volume variability and velocity challenges led to the emergence of new techniques and tools in data visualization acquisition and serialization Soft Computing being regarded as a plethora of technologies of fuzzy sets or Granular Computing neurocomputing and evolutionary optimization brings forward a number of unique features that might be instrumental to the development of concepts and algorithms to deal with big data This carefully edited volume provides the reader with an updated in depth material on the emerging principles conceptual underpinnings algorithms and practice of Computational Intelligence in the realization of concepts and implementation of big data architectures analysis and interpretation as well as data analytics The book is aimed at a broad audience of researchers and practitioners including those active in various disciplines in which big data their analysis and optimization are of genuine relevance One focal point is the systematic exposure of the concepts design methodology and detailed algorithms In general the volume adheres to the top down strategy starting with the concepts and motivation and then proceeding with the detailed design that materializes in specific algorithms and representative applications The material is self contained and provides the reader with all necessary prerequisites and augments some parts with a step by step explanation of more advanced concepts supported by a significant amount of illustrative numeric material and some application scenarios to motivate the reader and make some abstract concepts more tangible

Predictive Policing in Germany. Opportunities and challenges of data-analytical forecasting technology in order to prevent crime Vanessa Bauer,2020-01-08 Master s Thesis from the year 2019 in the subject Computer Science Theory grade A Management Center Innsbruck language English abstract This Master Thesis introduces theoretical fundamentals of Predictive Policing tools used in German police institutions such as Hot Spot techniques Near Repeat approaches Risk terrain Analysis and Concentric Zone Model In times of Big Data police work has also changed and the usage of forecasting technologies in order to prevent crime does not only vary state wide in definitions but also in its application Therefore objectives and appliances are described in general Additionally a chronological transformation is established in order to compare lineages in Germany with those in the USA Since Predictive Policing

polarises the research question deals with potential opportunities and challenges police institutions and the society have to deal with when it comes to leveraging data analytical forecasting technologies in order to prevent crime The motivation for writing the Master Thesis about the present topic stems from the fact that it is highly current and has not yet been thoroughly studied Preventing crime and thus ensuring a safe environment is an important field of research in our society and should be guaranteed with problem oriented policing Since there are varying considerations and application measures of PP according to different country side frameworks the Thesis provides an overview about technical functioning and practical appliance within Germany Therefore content provides on the one hand added value for lecturers and students in the field of Public Security Management and related studies or police officers in the upper grade of the civil service On the other hand it serves to educate citizens about how far the technologies have progressed in this area and to what extent this will influence the lives of citizens in the future Many police departments worldwide test software based forecasting technologies according to their relevance in practice Forecasting systems work with data sets about already registered crime activities Those datasets are then complemented with socio spatial calendar and meteorological data Since the amount of collected and analyzed data increases day by day the question arises as to what extent Machine Learning and Artificial Intelligence will influence the human advice origin to predict and prevent crime

Big Data Analytics and Management Forecasting

Behavior Beng Wee Goh, Na Li, Tharindra Ranasinghe, 2023 This paper investigates whether the use of big data analytics by firms has a spillover effect on management forecasting behavior Insights provided by big data could potentially improve firms ability to forecast earnings supply channel and investor demand for earnings information is likely higher for firms engaging in data analytics demand channel Using a text based measure of firms commitments to and usage of big data analytics we find that big data analytics usage is positively associated with the propensity to issue management earnings forecasts Consistent with the supply channel explanation we find that big data analytics usage is positively associated with management forecast accuracy as well Also supporting the demand channel explanation we find that big data analytics usage is associated with greater analyst following Our findings of improved disclosure following commitments to big data analytics highlight a potentially unintended benefit of the big data revolution

The Future Of Election Forecasting Using Social Media Based Methods. Prospect or Pitfall? Marla van Nieuwland,2015-11-24 Seminar paper from the year 2015 in the subject Communications Media and Politics Politic Communications grade 1 0 University of Constance language English abstract In 2013 Daniel Gayo Avello captured the state of the art regarding election prediction with social media publishing a meta analysis the very first one in this field of study Concluding after an extensive literature review that the prevailing view among scientists is overly optimistic Gayo Avello declares three major problems that have to be addressed by future research 1 The need to produce a true forecast that is published before the election 2 The need to take into account the biases on Twitter especially the unrepresentativeness of the sample 3 The need to incorporate sentiment rather than just tweet volume The research question of this paper is very similar to Gayo Avello s meta analysis to give an overview of the current state of the art two years later assess if the past problems and questions scientists raised have been discussed and in the last step answer whether or not Twitter can be used as an efficient alternative to traditional electoral forecasting Although two years might not be a lot of time considering the time it takes for a study to be conducted and published the number of scientists contributing to this fairly new field of research is extremely high therefore making much more understanding in a short time possible Necessarily I will only highlight a selection of studies not being able to shed light on all studies In a nutshell I will take the 3 demands by Gayo Avello as a guideline to order recent studies then give a quick insight into the current discussion in the scientific field and in the end come to the conclusion that traditional polling and social media based approaches do not

Forecasting Housing Output with Artificial-Intelligence-Based Big Data Analytics Xuxin Mao, 2023 Big Data and artificial intelligence are quickly changing economic forecasting practices While the big data analytics is gradually applied in the construction industry it has not been widely used for construction predictions Although the economists start to use Google search data to predict house prices they have not adopted advanced machine learning techniques such as natural language processing for predicting housing output We first review a history of forecasting techniques used in the 20th and early 21st century With artificial intelligence based big data analytics the study then uses natural language processing to select key Google search phases and predicts housing output with Google trends macroeconomic and market conditions data within a multivariate time series model We find that AI based big data analytics can help to explain the short term dynamics in the housing markets and provide some useful short term forecasts of construction output Meanwhile using all related information including macroeconomic and market conditions will improve the robustness of the forecasts Therefore the study fills the following research gaps Firstly it is the first research to use natural language processing to select key phases for constructing big data indices Secondly it adopts big data such as Google search data for predicting construction output in the housing market **Fuzzy Logic: Applications in Artificial Intelligence, Big Data, and Machine Learning** Lefteri H.
