IUTAM Symposium on Emerging Trends in Rotor Dynamics K. Gupta, 2011-01-06 Rotor dynamics is an important branch of dynamics that deals with behavior of rotating machines ranging from very large systems like power plant rotors for example a turbogenerator to very small systems like a tiny dentist s drill with a variety of rotors such as pumps compressors steam gas turbines motors turbopumps etc as used for example in process industry falling in between The speeds of these rotors vary in a large range from a few hundred RPM to more than a hundred thousand RPM Complex systems of rotating shafts depending upon their specific requirements are supported on different types of bearings There are rolling element bearings various kinds of fluid film bearings foil and gas bearings magnetic bearings to name but a few The present day rotors are much lighter handle a large amount of energy and fluid mass operate at much higher speeds and therefore are most susceptible to vibration and instability problems This have given rise to several interesting physical

phenomena some of which are fairly well understood today while some are still the subject of continued investigation Research in rotor dynamics started more than one hundred years ago The progress of the research in the early years was slow However with the availability of larger computing power and versatile measurement technologies research in all aspects of rotor dynamics has accelerated over the past decades The demand from industry for light weight high performance and reliable rotor bearing systems is the driving force for research and new developments in the field of rotor dynamics The symposium proceedings contain papers on various important aspects of rotor dynamics such as modeling analytical computational and experimental methods developments in bearings dampers seals including magnetic bearings rub impact and foundation effects turbomachine blades active and passive vibration control strategies including control of instabilities nonlinear and parametric effects fault diagnostics and condition monitoring and cracked rotors This volume is of immense value to teachers researchers in educational institutes scientists researchers in R D laboratories and practising engineers in industry

**Fluid Sealing** B. Nau,1992-04-30 With this 13th in the series of International Conferences on Fluid Sealing these meetings move into their third decade To be precise it is now thirty one years since BHRA as it then was convened with no little trepidation the first of these Conferences in Ashford England The massive set of proceedings now occupies a considerable length of shelf in my bookcase and represents a tremendous technological resource over 400 separate papers It is interesting that I seem to refer most often to the earlier volumes probably most of all to the very first Perhaps this is because this volume marks the beginning of historic times AD 0 for fluid sealing technology There were of course important publications in this field even before 1961 A notable example is the seminal work of my predecessor at BHRA Dr D F Denny whose researches on reciprocating fluid power seals The sealing mechanism of flexible packings was published in 1947 by a long since defunct government department the Ministry of Supply Another notable source is the Proceedings of the Institution of Mechanical Engineers 1957 Conference on Lubrication and Wear However there is more to fluid sealing technology than just tribology as we must now call lubrication and wear interest in static seals has really come to the fore in recent years witness the large batch of papers dealing with this subject in the present Conference Applied Mechanics Reviews ,2000 **International Conference Machinery, Electronics and Control Simulation** Li Wang,2014-09-26 Selected peer reviewed papers from the International Conference on Machinery Electronics and Control Simulation ICMECS 2014 September 27 28 2014 Weihai Shandong Province China **Paper** ,1998 **Mechatronics Engineering, Computing and Information Technology** X.D.
