Of them all it may be said that none have surpassed e government in attracting a significant number of researchers and practitioners from around the world. However the question remains whether everyone is ready to join the e government movement or if some are just blindly following the latest trend. Due to its breadth of discussion on a variety of topics relating to the intersection of technology with politics, democracy and government, this authoritative book is a valuable reference source for professionals, researchers and students in the field of e government, information management or knowledge management.

**Strategy, Structure and Corporate Governance** Nabyla Daidj, 2016-07-01 Since the beginning of the 2000s, important changes in external environments have affected the corporate governance practices of firms all around the world. The corporate governance structure in each country develops in response to country specific factors and conditions. Firms are currently engaged in a variety of dynamic business relationships such as business networks, strategic alliances and conglomerates, especially in high technology sectors. **Integrated Water Resources Management in the 21st Century: Revisiting the paradigm** Pedro Martinez-Santos, Maite M. Aldaya, M. Ramón Llamas, 2014-03-03 Integrated water resources management advocates a coordinated approach for managing water resources in a way that balances social and economic needs with concern for the environment. While potentially useful, integrated water management is also controversial. Supporters believe that the multi-dimensional nature of water can only be understood and managed from a holistic perspective while critics often argue that integrated water management lacks sufficiently well defined rules for its practical implementation. This book, written by academics, users and practitioners, provides a down-to-earth approach to the ideal of integrated water resources management, drawing from conceptual frameworks and real-life practice to identify the key aspects that are yet to be resolved. As such, it examines the role of water accounting, food trade, environmental externalities and intangible values as key aspects whose consideration may help the water management.
