**Industrial Software Applications** Rainer Geisler, 2015-02-24 This book is written for engineering students and working professionals. Technical professionals are increasingly involved in IT issues such as implementing IT systems, managing them, and taking part in requirements analysis and vendor selection. In this book, the basics of production planning systems (PPS) are covered, as well as their implementation in ERP Systems like SAP. Readers also learn the basics of practical IT management and software creation through detailed real-world examples. The book serves as a full 5 ECTS study module which fits into any engineering curriculum. 150 multiple-choice quizzes, practical exercises, and a text filled with experiential examples make it a convenient choice for self-study and for classroom use.

**Teaching Innovation in Architecture and Building Engineering** David Bienvenido-Huertas, María Luisa de la Hoz-Torres, Antonio Jesús Aguilar Aguilera, 2024-06-19 This book presents contributions on teaching innovation in university architecture and building engineering studies. The authors explain how the construction sector demands that future architects and building engineers have the knowledge and skills that allow them to meet the decarbonization objectives established by international organizations and that this causes the level of knowledge to be higher. The contributors further discuss new technologies and the internationalization of studies, presenting new challenges university studies must face. This heterogeneity is represented in the chapters that make up this book, developed by researchers from different countries. The book is divided into three blocks: i) Active learning methodologies, ii) Innovative methodologies applied to learning process, and iii) Traditional vs. Advanced Techniques. The chapters of the book represent an advance in the current knowledge of teaching innovation techniques in university architecture and building engineering studies.

**Arts Management** Carla Stalling Walter, 2015-05-22 Arts Management is designed as an upper division undergraduate and graduate level text that covers the principles of arts management. It is the most comprehensive up-to-date and technologically advanced textbook on arts management on the market. While the book does include the background necessary for understanding the global arts marketplace, it assumes that cultural fine arts come to fruition through entrepreneurial processes and that cultural fine arts organizations have to be entrepreneurial to thrive. Many cases and examples of successful arts organizations from the United States and abroad appear in every chapter. A singular strength of Arts Management is the author's skilful use of in-text tools to facilitate reader interest and engagement. These include learning objectives, chapter summaries, discussion questions, and exercises, case studies, and numerous examples and cultural spotlights. Online instructor's materials with PowerPoints are available to adopters.
