**PROBLEM SET #2**

**Problem 1:**

A firm uses two variable inputs, labor (L) and raw material (M), in producing its output. At its current level of inputs:

$$C_L = \$10/\text{unit}, MP_L = 25$$

$$C_M = \$2/\text{unit}, MP_M = 4$$

1. Determine whether the firm is operating efficiently, given that its objective is to minimize the cost of producing the given level of output.
2. Determine what changes (if any) in the relative proportions of a labor and raw materials need to be made to operate efficiently.

**Problem 2:**

Suppose that a firm's production function is given by the following relationship:

$$Q = 2.5 L^{0.5} K^{0.5}$$

Where Q = output, L = Labor input, and K = capital input.

1. Determine the percentage increase in output if labor input is increased by 10 percent (assuming that capital input is held constant).
2. Determine the percentage increase in output if capital input is increased by 2.5 percent (assuming that labor is held constant).
3. Determine the percentage increase in output if both labor and capital are increased by 20 percent.

**Problem 3:**

Do the following functions exhibit increasing, constant, or decreasing returns to scale? What happens to the marginal product of each individual factor as that factor is increased, and the other factor is held constant?

a.  $q = 2L + 2K$

b.  $q = (2L + 2K)^{\frac{1}{2}}$

c.  $q = 3LK^2$

d.  $q = L^{\frac{1}{2}} K^{\frac{1}{2}}$

e.  $q = 4L^{\frac{1}{2}} + 4K$

**Problem 4:**

During the last few days the Superior Company has been running into problems with its computer system. The last run of the production cost schedule resulted in the incomplete listing shown below. From your knowledge of cost theory, fill in the blanks.

**Mathematics** Earl K. Bowen, 1967      **Managerial Economics in a Global Economy** Dominick Salvatore, 2007  
Managerial Economics in a Global Economy Sixth Edition synthesizes economic theory, decision science, and various aspects of business administration, studying how they interact as a firm attempts to reach optimal profitability and efficiency in the face of constraints. It features 129 real-world case studies and six longer, detailed studies more than any other text on the market. In addition, author Dominick Salvatore fully integrates material on the international ramifications of managerial decisions into the entire text instead of segregating it in a separate chapter or in a few case studies. The book is divided into five parts: Part One examines the nature and scope of managerial economics, presents the theory of the firm, and reviews optimization techniques; Part Two analyzes demand; Part Three presents the theory and measurement of the firm's production and costs; Part Four brings together demand analysis with production and cost analysis to show how price and output are determined under various forms of market organization; Part Five examines regulation and antitrust, the role of government in the economy, risk analysis, long-term investment decisions, and capital budgeting. Managerial Economics in a Global Economy Sixth Edition is ideal for upper-level undergraduate and graduate courses in managerial economics.      *Managerial Economics* Atmanand, 1997 Textbook for students studying management      *Managerial Economics* Lila Jean Truett, Dale B. Truett, 1998 Designed for a one-semester course at the undergraduate or MBA level in managerial economics, this text also works well as a text reference for a second course, emphasizing cases. Managerial Economics takes a traditional neo-classical approach to managerial economics. It is a proven book with a reputation for concise and clear writing, correct presentation of economics, and outstanding end-of-chapter problems and cases. Its tried-and-true problem-solving approach helps students see how managers can use economic analysis to solve business problems and make better decisions.      *Managerial Economics* Steven T.
