internetworking routing and switching concepts and guarantees the certification to the readers with a unique presentation in the field of internetworking. It is written like usual textbooks. The differences are in the way of presenting the required information which is so simple, the addition of more than 2200 learning questions and the built-in of 13 exam engines and flash cards. The learning questions at the end of a chapter represent a review to the information presented in that chapter as well as provide an easy way for the preparation of the real exam. The questions are made to focus on the important information. You have two options to read the questions and their answers either by using the built-in exam engine at the end of each chapter or by reading the questions and their answers in the EBook. With more than 840 pages, the book includes explanatory text and provides new types of test formats to simplify both the exam and the presenting of the information to the readers including over 2200 challenging multiple choices, single answer, multiple choices, multiple answers, fill in the blank, testlet, drag and drop, and simulation test formats. A variety of internetworking scenarios and exhibits are used in this book to illustrate the topics related to the CISCO internetworking fundamentals. In line with modern training and teaching methodology, the questions are included to encourage the reader to stop and think as well as to test his knowledge in preparation for a successful CCNA CCENT examination. Moreover, the answers of the questions are comprehensively described so that you could understand the concepts behind each question very well and be more confident on the CISCO exam. The exams are made so that you could feel like on real CISCO exams. Therefore, the questions in this book require the same level of analysis as the question on the CCNA CCENT ICND1 exams. Varieties of internetworking designing and troubleshooting scenarios are described in this book. While these scenarios prepare you for the exam, you will obtain strong experiences on CISCO switches, CISCO routers, CISCO internetworking, and the associated protocols and technologies.
