Proceedings of the Thirteenth ACM Symposium on Operating Systems Principles, October 13-16, 1991, Asilomar Conference Center, Pacific Grove, CA ,1991 **Operating System Concepts** Abraham Silberschatz, Peter B. Galvin, Greg Gagne, 2005 This new seventh edition of the book has been brought up to date to include recent developments in operating systems such as Windows XP and the new small footprint operating systems that work in hand held devices such as the Palm and in cell phones Most of the book is on general purpose operating systems such as Linux and those from Microsoft But at the end of the book there are chapters on other types of operating such as Real Time Operating Systems and MultiMedia OS s Finally there are some chapters which the authors call case studies In these one chapter goes into a detailed discussion of Linux another chapter covers Windows XP Chapter 23 covers several early operating systems that helped to define the features that make up modern os s These include Atlas XDX 940 THE RC 4000 CTSS MULTICS OS 360 and MACH along with brief mentions of several others Note that this not a book on how to use operating systems this is a book on how operating systems are designed It is intended for upper level undergraduate students or first year graduate students *Advances in Distributed Systems* Sacha Krakowiak, Santosh Shrivastava, 2003-06-26 In 1992 we initiated a research project on large scale distributed computing systems LSDCS It was a collaborative project involving research institutes and universities in Bologna Grenoble Lausanne Lisbon Rennes Rocquencourt Newcastle and Twente The World Wide Web had recently been developed at CERN but its use was not yet as common place as it is today and graphical browsers had yet to be developed It was clear to us and to just about everyone else that LSDCS comprising several thousands to millions of individual computer systems nodes would be coming into existence as a consequence both of technological advances and the demands placed by applications We were excited about the problems of building large distributed systems and felt that serious rethinking of many of the existing computational paradigms algorithms and structuring principles for distributed computing was called for In our research proposal we summarized the problem domain as follows We expect LSDCS to exhibit great diversity of node and communications capability Nodes will range from mobile laptop computers workstations to supercomputers Whereas mobile computers may well have unreliable low bandwidth communications to the rest of the system other parts of the system may well possess high bandwidth communications capability To appreciate the problems posed by the sheer scale of a system comprising thousands of nodes we observe that such systems will be rarely functioning in their entirety Operating Systems Concepts with Java Abraham Silberschatz, Greg Gagne, Peter B. Galvin, 2004 New edition of the bestseller provides readers with a clear description of the concepts that underlie operating systems Uses Java to illustrate many ideas and includes numerous examples that pertain specifically to popular operating systems such as UNIX Solaris 2 Windows NT and XP Mach the Apple Macintosh OS IBM s OS 2 and Linux Style is even more hands on than the previous edition with extensive programming examples written in Java and C New coverage includes recent advances in Windows 2000 XP Linux Solaris 9

and Mac OS X Detailed case studies of Windows XP and Linux give readers full coverage of two very popular operating systems Also available from the same authors the highly successful Operating System Concepts Sixth Edition 0 471 25060 0
