Asymmetric Cell Division in Development, Differentiation and Cancer Jean-Pierre Tassan, Jacek Z. Kubiak, 2017-04-12 This book provides readers with an overview of the frequent occurrence of asymmetric cell division. Employing a broad range of examples, it highlights how this mode of cell division constitutes the basis of multicellular organism development and how its misregulation can lead to cancer. To underline such developmental correlations, readers will, for example, gain insights into stem cell fate and tumor growth. In turn, subsequent chapters include descriptions of asymmetric cell division from unicellular organisms to humans in both physiological and pathological conditions. The book also illustrates the importance of this process for evolution and our need to understand the background mechanisms, offering a valuable guide not only for students in the field of developmental biology but also for experienced researchers from neighboring fields. *Glencoe Science* McGraw-Hill Staff, 2001-07-01

Macromolecular Protein Complexes V J. Robin Harris, Jon Marles-Wright, 2024-07-04 This volume in the Subcellular Biochemistry (SCBI) series is a continuation of several previous volumes devoted to the structural and functional study of protein complexes. The expanding nature of this field of study, derived mainly from X-ray crystallography and electron cryomicroscopy, justifies the continuing expansion of coverage in an almost encyclopaedic manner within the SCBI series. Experienced and active researchers in the field shed light on the biology of protein complexes involved in important cellular functions from different perspectives, such as AcrAB/TolC and CST.
