**What are Physical Properties?**

Start with the title in the chapter before you start to read the chapter. Focus on the various properties.

A physical property is a characteristic that can be observed without changing the identity of the substance. However, the properties of an object change as it reacts. For example, you can identify an object's color, shape, size, or weight. However, the properties of an object are determined by the properties of the particles that it is made of.

Many of the physical properties of materials that make up objects can be measured. These properties include density, hardness, magnetism, and the ability to conduct heat and electricity.

Some physical properties depend on how much of a material you have. In other words, a large amount of a material may have different properties than a smaller amount of the material. Other physical properties do not depend on how much of the material you have. They show that no matter how large or small something is, it has the same physical property or always the same.
