

Chapter 2: exploring data with tables and graphs. (Feb. 6) online

2-1: frequency distributions for organizing and summarizing data.

2-2 Histograms

2-3 graphs that enlighten and graphs that deceive (one-half full)

2-4 scatterplots, correlation, and regression

Continued: (lecture 3 Class)

- cumulative frequency distribution:
 - o the frequency for each class is the sum of the frequencies for that class and all previous classes.
- critical thinking: using frequency distributions to understand data:
 - o in statistics we are often interested in determining whether that data have a normal distribution.
 - the frequencies start low, then increase to one or two high frequencies, and then decrease to a low frequency.
 - the distribution is approximately symmetric, frequencies preceding the maximum frequency should be roughly a mirror image of those that follow the maximum frequency.
- Gaps:
 - o the presence of gaps can show that the data are from two or more different populations.
 - o however, the converse is not true, because data from different populations do not necessarily result in gaps.

Example: Exploring Data: What Does a Gap Tell Us? (1-1-15)

The table shows a frequency distribution of the weights (pounds) of randomly selected people.

Weight (pounds)	Frequency
120-130	20
130-140	40
140-150	0
150-160	0
160-170	0
170-180	0
180-190	10
190-200	20
200-210	0

Example: Exploring Data: What Does a Gap Tell Us? (1-1-15)

- Examination of the frequencies reveals a large gap between the lightest weights and the heaviest weights.
- This suggests that we have two different populations: (Persons made before 1960 are 90% under and 10% over.) (Persons made after 1960 are 20% under and 80% over.)
- What explains the large gap between the lightest weights and the heaviest weights in the table?
