Shammas, 2007-11-10 The past thirty years have witnessed a growing worldwide desire that positive actions be taken to restore and protect the environment from the degrading effects of all forms of pollution air water soil and noise Because pollution is a direct or indirect consequence of waste the seemingly idealistic demand for zero discharge can be construed as an unrealistic demand for zero waste However as long as waste continues to exist we can only attempt to abate the subsequent pollution by converting it to a less noxious form Three major questions usually arise when a particular type of pollution has been identified 1 How serious is the pollution 2 Is the technology to abate it available and 3 Do the costs of abatement justify the degree of abatement achieved This book is one of the volumes of the Handbook of Environmental Engineering series The principal intention of this series is to help readers formulate answers to the last two questions above The traditional approach of applying tried and true solutions to specific pollution problems has been a major contributing factor to the success of environmental engineering and has accounted in large measure for the establishment of a methodology of pollution control However the realization of the ever increasing complexity and interrelated nature of current environmental problems renders it imperative that intelligent planning of pollution abatement systems be undertaken

Membrane-based Hybrid Processes for Wastewater Treatment Maulin P. Shah, Susana Rodriguez-Couto, 2021-05-27 Membrane Based Hybrid Processes for Wastewater Treatment analyzes and discusses the potential of membrane based hybrid processes for the treatment of complex industrial wastewater the recovery of valuable compounds and water reutilization In addition recent and future trends in membrane technology are highlighted Industrial wastewater contains a large variety of compounds such as heavy metals salts and nutrients which makes its treatment challenging Thus the use of conventional water treatment methods is not always effective Membrane based hybrid processes have emerged as a promising technology to treat complex industrial wastewater Discusses the properties mechanisms advantages limitations and promising solutions of different types of membrane technologies Addresses the optimization of process parameters Describes the performance of different membranes Presents the potential of Nanotechnology to improve the treatment efficiency of wastewater treatment plants WWTPs Covers the application of membrane and membrane based hybrid treatment technologies for wastewater treatment Includes forward osmosis electrodialysis and diffusion dialysis Considers hybrid membrane systems expanded to cover zero liquid discharge salt recovery and removal of trace contaminants *A Guide to Professional Licensure for Agricultural, Food, and Biological Systems Engineers* Christopher G. energy conservation in distillation Excel spreadsheets offering additional practice with problems in distillation diffusion mass
transfer and membrane separation **Transport Processes and Separation Process Principles (includes Unit
Operations)** Christie John Geankoplis, 2013-07-25 Appropriate for one year transport phenomena also called transport
processes and separation processes course First semester covers fluid mechanics heat and mass transfer second semester
covers separation process principles includes unit operations The title of this Fourth Edition has been changed from
Transport Processes and Unit Operations to Transport Processes and Separation Process Principles Includes Unit Operations
This was done because the term Unit Operations has been largely superseded by the term Separation Processes which better
reflects the present modern nomenclature being used The main objectives and the format of the Fourth Edition remain the
same The sections on momentum transfer have been greatly expanded especially in the sections on fluidized beds flow
meters mixing and non Newtonian fluids Material has been added to the chapter on mass transfer The chapters on
absorption distillation and liquid liquid extraction have also been enlarged More new material has been added to the sections
on ion exchange and crystallization The chapter on membrane separation processes has been greatly expanded especially for
