### 2. Decision Trees

A decision tree is a flowchart representing a hierarchical partition of the feature space. The decision tree consists of nodes that form a rooted tree, starting at a root node with a node called "root". Each node has outgoing edges. Edges are labeled with values of the features. A node with outgoing edges is called an internal or node. All other nodes are called leaf nodes. The leaf nodes are labeled with the predicted class. The decision tree is a hierarchical model that can be used for classification and regression. The decision tree is a hierarchical model that can be used for classification and regression.
