Range Measurement Applications

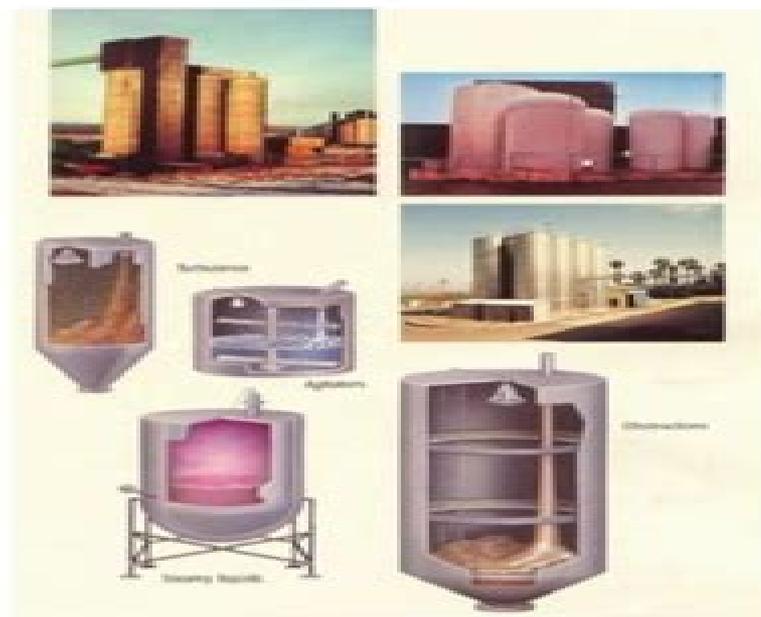

Figure 7.1: Industrial range measurement applications

Probably one of the greatest visions of the process industry has been a truly wire-and-rotate non-contact, non-intrusive continuous level measurement instrument, a single technology that can be used in every application, a device that is self-calibrating and maintenance-free, that is easy to install onto any vessel with any process connection. At the same time this device should offer an accuracy to within 1mm, it must be low-cost and capable of paying for itself in under three months while able to operate in excess of 20 years. S.A. Management Science Applications Hamed Kamal Eldin, Hooshang M. Beheshti, 1981 **Application of LADAR in the Analysis of Aggregate Characteristics** Linbing Wang, 2012 NCHRP Project 4 34 Application of LADAR in the Analysis of Aggregate Characteristics was conducted by Virginia Polytechnic Institute and State University Blacksburg Virginia with participation by the University of Illinois at Urbana Champaign The objective of the project was to develop and evaluate a laser detection and ranging LADAR system capable of precise and accurate measurement of the aggregate characteristics of shape volume angularity surface texture specific surface area and volumetric gradation Ideally the final system would be applicable to aggregate in three size categories coarse 2 in to 4 fine 4 to 200 and microfine P200 and suitable for routine use in research central and field laboratories for Portland cement concrete and asphalt concrete mixture design and quality assurance The project which developed new equipment and computer algorithms proved technically challenging The project team developed a prototype Fourier transform interferometry FTI system with fully functional hardware and software The system can characterize aggregate shape angularity texture surface area and volume of a wide range of aggregate sizes with high accuracy Assembly and operation of the FTI system consisting of a chargecoupled device CD camera a fringe source a sample platform and a software package are fully documented in the report The accuracy and precision of the prototype FTI system are comparable to or better than those of other systems now available to automatically measure aggregate characteristics but its current range of aggregate size 3/4 in to 50 is narrower than desired Extending this size range is possible in the future by using a CCD camera with a larger field of view and increasing the system resolution through appropriate selection of the equipment components **Geophysical Applications of GPS Kinematic Techniques** Joachim Fritz Genrich, 1992 **Occupational Noise and Workplace Acoustics** Dariusz Pleban, 2020-09-01 Modern noise research and assessment techniques are commonly used in the workplace and our personal living environment Occupational Noise and Workplace Acoustics presents new innovative advanced research and evaluation methods of parameters characterizing acoustic field and noise in the working environment as well as acoustic properties of rooms and noise reduction measures This includes acoustic field visualization methods field imaging techniques wireless sensor networks and the Internet of Things IoT optimization methods using genetic algorithms acoustic quality assessment methods for rooms and methods for measuring ultrasonic noise in the frequency range of 10 40 kHz This book is a valuable resource for individuals and students interested in the areas of acoustic and sound engineering as it provides The latest techniques and methods in the field of noise reduction and improvement of acoustic comfort Innovative and advanced acoustic field visualization techniques for those with an auditory impairment Explains noise reduction through proper workplace design Discusses use of wireless sensor networks and the IoT for monitoring noise and Provides acoustic quality assessment methods The authors intention to

expound on advanced issues in a lucid and accessible way was rewarded with success In the book an expert will find a number of hints helpful in solving actual problems whereas a layperson will be able to form a view on challenges facing contemporary technology What should also be emphasized is the book's soundness in documenting these advanced theses and postulates with diligently conducted empirical research Despite a wide thematic range the book is written consistently and under no circumstances can be considered a collection of randomly selected problems The content corresponds fully to the title The authors are consistent in acquainting the reader with topical scientific issues concerning assessment of acoustic hazards and the methodology of combating them Professor Zbigniew D browski BEng PhD DSc Warsaw University of Technology
