Letter	Word	Definition
		Elimination of a species from Earth.
		Pathway of natural selection in which one uncommon phenotype is selected over a more common phenotype.
		Isolation between populations due to physical barriers.
		Process in which two or more species evolve in response to changes in each other.
		Proportion of one allele, compared with all the alleles for that trait, in the gene pool.
		Condition in which a population's allele frequencies for a given trait do not change from generation to generation.
		Change in allele frequencies due chance alone, occurring most commonly in small populations.
		Process by which one species evolves and gives rise to many descendant species that occupy different ecological niches.
		Isolation between populations due to barriers related to time, such as differences in mating periods or differences in the time of day that individuals are most active.
		Genetic drift that results from an event that drastically reduces the size of a population.
		Observable change in the allele frequencies of a population over a few generations.
		Pathway of natural selection in which two opposite, but equally uncommon, phenotypes are selected over the most common phenotype.
		Isolation between populations due to differences in courtship or mating behavior.
