Handbook of Biofuels Sanjay Sahay,2021-10-31 Handbook of Biofuels looks at the many new developments in various type of bioenergy along with the significant constraints in their production and or applications Beyond introducing current approaches and possible future directions of research this title covers sources and processing of raw materials to downstream processing constraints involved and research approaches to address and overcome these needs Different combinations of products from the biorefinery are included along with the material to answer questions surrounding the optimum process conditions for conversion of different feedstocks to bioenergy the basis for choosing conversion technology and what bioenergy products make economic sense With chapters on the techno economic analysis of biofuel production and concepts and step by step approaches in bioenergy processing the objective of this book is to present a comprehensive and all encompassing reference about bioenergy to students teachers researchers and professionals Reviews all existing and emerging technologies surrounding the production of advanced biofuels including biodiesel and bioethanol Includes biofuel applications with compatible global application case studies Offers new pathways for converting biomass

Biotechnological Advances in Biorefinery Komal Agrawal,Pradeep Verma,2024-10-03 This book is unique as it will cover the latest technological advancements in the field of biorefinery and how it is a major futuristic component of global biofuel research Initially the role of bio based waste materials microorganisms and their bioactive metabolites in biorefinery will be focused Further recent advances and emerging topics that are related to industrially important products such as biofuels hydrogen production will also be elaborated The book addresses the lack of understanding of recent technological advancement such as life cycle assessment LCA and techno economic assessment TEA as well The systems for biorefineries demand a methodical approach to identifying effects and evaluating their long term viability Thus a futuristic paradigm focusing on in silico studies will also be incorporated enabling us to understand the developments and impacts of bio based materials towards a circular and sustainable economy Additionally the proposed book will also discuss various strategies such as the analysis of cost effectiveness nanotechnology value sensitive design VSD and also emphasize the economic technical and environmental aspects that affect their production as well as the future perspective in terms of the market scenario Thus the book will provide cumulative information on various dimensions of biorefinery and its role as a major bio economic industry of the future for researchers industrialists entrepreneurs career starters and policymakers The shift towards a bioeconomy not only promises innovative solutions to pressing global challenges but also opens up new avenues for various industries and policymakers Thus biorefinery is regarded as a crucial

aspect of biobased economy ultimately leading the path towards sustainability

Sustainable Food Waste-to-Energy Systems Thomas Trabold, Callie W. Babbitt, 2018-09-05 Sustainable Food Waste to Energy Systems assesses the utilization of food waste in sustainable energy conversion systems. It explores all sources of waste generated in the food supply chain downstream from agriculture with coverage of industrial, commercial, institutional, and residential sources. It provides a detailed analysis of the conventional pathways for food waste disposal and utilization, including composting, incineration, landfilling, and wastewater treatment. Next users will find valuable sections on the chemical, biochemical, and thermochemical waste to energy conversion processes applicable for food waste and an assessment of commercially available sustainable food waste to energy conversion technologies. Sustainability aspects including consideration of environmental, economic, and social impacts are also explored. The book concludes with an analysis of how deploying waste to energy systems is dependent on cross-cutting research methods including geographical information systems and big data. It is a useful resource for professionals working in waste to energy technologies as well as those in the food industry and food waste management sector planning and implementing these systems but is also ideal for researchers, graduate students, energy policymakers, and energy analysts interested in the most recent advances in the field. Provides guidance on how specific food waste characteristics drive possible waste to energy conversion processes. Presents methodologies for selecting among different waste to energy options based on waste volumes, distribution, and properties, local energy demand, electrical, thermal, steam opportunities for industrial symbiosis, regulations, and incentives, and social acceptance, etc. Contains tools to assess potential environmental and economic performance of deployed systems. Mitigating Unsustainable Practices in Construction and Architecture González-Lezcano, Roberto Alonso, Sansaniwal, Sunil Kumar, 2025-09-18 The construction and architecture industry plays a critical role in advancing global efforts toward sustainability, resilience, and climate change mitigation. As one of the most resource-intensive sectors, it must rapidly adopt circular economy principles and green technologies to reduce its environmental footprint. With growing urbanization, aging infrastructure, and increased energy demand, the push for energy-efficient, decarbonized built environments is more urgent than ever. Transforming the built environment is essential not only for reducing emissions but also for ensuring long-term economic viability and social well-being. This transition supports broader global objectives for clean energy, equitable resource use, and sustainable development. *Mitigating Unsustainable Practices in Construction and Architecture* explores research and concrete actions that can be widely implemented in the built environment for more sustainable construction. It addresses global policies and regulations aimed at supporting climate change mitigation and adaptation strategies for clean and sustainable construction and architecture. Covering topics such as adaptive behavior, machine learning, and urban development, this book is an excellent resource for architects, engineers, urban planners,

policymakers researchers academicians and more
