**Interdisciplinary Approaches** Clara D. Craver, 2012-12-06 Physical and spectroscopic methods have been used jointly for characterization of polymers for at least four decades Yet new techniques permit increasingly refined determination of polymer chemistry and morphology The correlation of this knowledge with physical properties of polymers is helpful to planned synthesis of new products The most prominent spectroscopic techniques through the forties and fifties were infrared

and ultraviolet spectroscopy Nuclear magnetic resonance electron spin resonance and Mossbauer spectroscopy started making significant contributions to polymer chemistry in the early sixties Still more recently fluorescence spectroscopy and laser Raman spectroscopy have become readily applicable to polymers and are contributing significantly to the understanding of the relationship between polymer structure and properties Determination of the distribution of monomer sequences by molecular size has become possible through combined gel permeation chromatography and spectroscopic analysis Fragments of polymers from chemical breakdown or from pyrolysis are further fractionated and structurally analyzed The relationship between the chemistry of polymers and performance can be determined from changes in chemical structure and orientation after curing degradation or physical or thermal manipulation of the polymers

Characterisation of Polymers by Thermal Analysis W.M. Groenewoud, 2001-05-21 Thermal Analysis TA has become an indispensable family of analytical techniques in the polymer research The increased importance of these techniques can be seen as the result of three more or less parallel developments a tempestuous development of TA measuring techniques in combination with a high degree of automation the strongly increased understanding of the underlying theory and the increasing knowledge of the relation between the polymers chemical structure and their physical properties These areas are still in their developmental stages especially the third area The increasing knowledge of the dependence of physical properties on chemical structure just accentuated more and more the need for accurate

thermoanalytical measurements and this knowledge is very important for the first stages of the development of new polymeric systems Besides the contribution of TA remains necessary for the technical and commercial development of such a new polymer system The use of the various TA techniques in these processes is described in this book in nine chapters while chapter ten illustrates the information obtained about different polymers during special case studies This book illustrates in this way applications of a wide variety of TA techniques whilst it is written from a materials characterisation rather than from a TA point of view with attention being paid to the chemical structure physical properties correlations
