Thermodynamics, Gas Dynamics, and Combustion Henry Clyde Foust III, 2021-12-07 This textbook provides students studying thermodynamics for the first time with an accessible and readable primer on the subject. The book is written in three parts: Part I covers the fundamentals of thermodynamics, Part II is on gas dynamics, and Part III focuses on combustion. Chapters are written clearly and concisely and include examples and problems to support the concepts outlined in the text. The book begins with a discussion of the fundamentals of thermodynamics and includes a thorough analysis of engineering devices. The book moves on to address applications in gas dynamics and combustion to include advanced topics such as two-phase critical flow and blast theory. Written for use in Introduction to Thermodynamics, Advanced Thermodynamics, and Introduction to Combustion courses, this book uniquely covers thermodynamics, gas dynamics, and combustion in a clear and concise manner, showing the integral connections at an advanced undergraduate or graduate student level. **Nonlinear Optimization Applications Using the GAMS Technology** Neculai Andrei, 2013-06-22 Here is a collection of nonlinear optimization applications from the real world expressed in the General Algebraic Modeling System (GAMS). The concepts are presented so that the reader can quickly modify and update them to represent real world situations. **Computational Intelligence: A Compendium** John Fulcher, L. C. Jain, 2008-06-16 Computational Intelligence: A Compendium presents a well-structured overview about this rapidly growing field with contributions of leading experts in Computational Intelligence. The main focus of the compendium is on applied methods, tried and proven effective to real-world problems, which is especially useful for practitioners, researchers, students, and also newcomers to the field. The 25 chapters are grouped into the following themes: I Overview and Background, II Data Preprocessing and Systems Integration, III Artificial Intelligence, IV Logic and Reasoning, V Ontology, VI Agents, VII Fuzzy Systems, VIII Artificial Neural Networks, IX Evolutionary Approaches, X DNA and Immune-based Computing. **A Field Guide to Genetic Programming**, 2008 Genetic programming (GP) is a systematic, domain-independent method for getting computers to solve problems automatically, starting from a high-level statement of what needs to be done. Using ideas from natural evolution, GP starts from an ooze of random computer programs and progressively refines them through processes of mutation and sexual recombination until high-fitness solutions emerge. All this without the user having to know or specify the form or structure of solutions in advance. GP has generated a plethora of human-competitive results and applications, including novel scientific discoveries and patentable inventions. This unique overview of this exciting technique is written by three of the most active scientists in GP. See www.gp-field-guide.org.uk for more information on the book. **Chemical Engineering Education**, 2001 *Low-emission Ammonia Production and Utilization* Kevin Rouwenhorst, 2026-02-23 By virtue of not containing carbon, ammonia (NH₃) is considered a zero-carbon fuel. This book provides an introduction and technological context for the current role of ammonia as a fertilizer and chemical, as well as ammonia as a zero-carbon fuel and hydrogen carrier. The book emphasizes industrial aspects of low-emission

ammonia with scientific explanations for low carbon fossil ammonia production and renewable ammonia production via various electrolysis technologies as well as storage handling and utilization of ammonia for energy applications while also covering safety regulations environmental considerations business methods and policy Thus this book presents the state of the art of relevant technologies in the energy transition All in all ammonia production is set to triple over the coming decades while the ammonia infrastructure is expected to scale up by an order of magnitude Low emission Ammonia Production and Utilization is an invaluable reference source for academics and industry workers as well as policy makers investigating all relevant sustainable ammonia production and utilisation technologies

Chemical Engineering ,2003 **Inleiding chemie en chemische technologie** J.A.M. Kuipers,2016 **Nature** Sir Norman Lockyer,1926 **Information Sources in Engineering** Roderick A. MacLeod,Jim Corlett,2005 The aim of each volume of this series Guides to Information Sources is to reduce the time which needs to be spent on patient searching and to recommend the best starting point and sources most likely to yield the desired information The criteria for selection provide a way into a subject to those new to the field and assists in identifying major new or possibly unexplored sources to those who already have some acquaintance with it The series attempts to achieve evaluation through a careful selection of sources and through the comments provided on those sources

Numerical Approaches to Combustion Modeling Elaine S. Oran,Jay P. Boris,1991 Municipal Solid Waste Management in Developing Countries Sunil Kumar,2016-11-18 This book contains detailed and structured approaches to tackling practical decision making troubles using economic consideration and analytical methods in Municipal solid waste MSW management Among all other types of environmental burdens MSW management is still a mammoth task and the worst part is that a suitable technique to curb the situation in developing countries has still not emerged Municipal Solid Waste

Management in Developing Countries will help fill this information gap based on information provided by field professionals. This information will be helpful to improve and manage solid waste systems through the application of modern management techniques. It covers all the fundamental concepts of MSWM, the various component systems such as collection, transportation, processing, and disposal, and their integration. This book also discusses various component technologies available for the treatment, processing, and disposal of MSW. Written in view of actual scenarios in developing countries, it provides knowledge to develop solutions for prolonged problems in these nations. It is mainly for undergraduate and postgraduate students, research scholars, professionals, and policy makers.

Engineering Catalysis Dmitry Murzin, 2020. With well over 90% of all processes in the industrial chemical production being of catalytic nature, catalysis is a mature though ever interesting topic. The idea of this book is to tackle various aspects of heterogeneous catalysis from the engineering point of view and go all the way from engineering of catalysis, catalyst preparation, characterization, reaction kinetics, mass transfer, to catalytic reactors and the implementation of catalysts in chemical technology. Aimed for graduate students, it is also a useful resource for professionals coming from the more academic side.
