

## ***Cells and Their Organelles***

The **cell** is the basic unit of life. The following is a glossary of animal cell terms. All cells are surrounded by a **cell membrane**. The cell membrane is **semipermeable**, allowing some substances to pass into the cell and blocking others. It is composed of a double layer of **phospholipids** and **embedded proteins**. Plant cells have an additional layer surrounding them called the **cell wall**. The cell wall is made of nonliving material called cellulose. The **centrosome** (also called the "microtubule organizing center") is a small body located near the nucleus. The centrosome is where **microtubules** are made. During **cell division (mitosis)**, the centrosome divides and the two parts move to opposite sides of the dividing cell. The **centriole** is the dense center of the centrosome. Microtubules are shaped like soda straws and give the nucleus and cell its shape.
