STATES OF MATTER

SECTION 13.1 THE NATURE OF GASES (pages 385–389)

This section introduces the kinetic theory and describes how it applies to gases. It defines gas pressure and explains how temperature is related to the kinetic energy of the particles of a substance.

► Kinetic Theory and a Model for Gases (pages 385–386)

- The energy an object has because of its motion is called kinetic energy.
- Circle the letter of each sentence that is true about the assumptions of the kinetic theory concerning gases.
 - A gas is composed of particles with insignificant volume that are relatively far apart from each other.
 - Strong attractive forces exist between particles of a gas.
 - Gases tend to collect near the bottom of a container.
 - The paths of uninterrupted travel of particles in a gas are relatively short because the particles are constantly colliding with each other or with other objects.
- Is the following statement true or false? According to the kinetic theory, collisions between particles in a gas are perfectly elastic because kinetic energy is transferred without loss from one particle to another, and the total kinetic energy remains constant. true

► Gas Pressure (pages 386–387)

- Gas pressure results from the force exerted by a gas per unit surface area of an object.
- Simultaneous collisions of billions of particles in a gas with an object result in gas pressure.
- What force holds the particles of air in Earth's atmosphere? gravity
- What kind of pressure is measured with a barometer? atmospheric pressure

Recognition of States in International Law Pavle Kilibarda,2024-08-03 Although the recognition of States is a common occurrence in international relations and retains a central position in discussions of international law its nature and legal effects have remained controversial well into the twenty first century While some believe that recognition plays a fundamental role in the creation of statehood others deny recognition any legal value Regardless debates surrounding any case where statehood is disputed will sooner or later turn to the matter of recognition or lack thereof by other States This book challenges the widespread views of statehood as an absolute or empirical fact and of recognition as merely declaratory

in the creation of States as the primary and original persons of international law Drawing upon a comparative analysis of contested States ranging from Palestine and Kosovo to Somaliland and Eastern Ukraine this book seeks to ascertain the normative value and the effects of the act of recognition in various situations distinguishing between cases where statehood may be inferred from applicable rules of international law cases where statehood could only be explained by recognition and cases where the establishment of a State is prevented by international legal norms In addition to discussing a range of issues related to recognition this book provides an up to date overview of the history of recognition the positions of various governments and a broad critical summary of domestic and international jurisprudence

Information, Sensation, and Perception Kenneth H. Norwich, 1993 One of the primary aims of this book is to show that nearly all of the empirical laws of sensory science discovered by laboratory measurement during the past 130 years can be derived theoretically from one fundamental equation The other primary aim of the book is to demonstrate the philosophical origins of this single equation and to show how it must change the way in which we view the nervous system and the process of perception This fundamental equation and the philosophy of perception which it embodies comprise what Norwich and his colleagues term as the entropy theory of perception
