## Chapter 4 Cell Reproduction:

**The Biology of Cell Reproduction** Renato Baserga, 1985 Since World War II cell biology and molecular biology have worked separately in probing the central question of cancer research But a new alliance is being forged in the effort to conquer cancer Drawing on more than 500 classic and recent references Baserga's work provides the unifying background for this cross fertilization of ideas

**Reproduction of Eukaryotic Cells** David M. Prescott, 2012-12-02 Reproduction of Eukaryotic Cells organizes in a single source the principal facts and observations on the cell life cycle and reproduction of eukaryotic cells The aim is to increase the overall understanding of how these cells reproduce themselves and how this reproduction is regulated The book begins with a discussion of the sections of the cell cycle and regulation of cell reproduction Separate chapters on cell growth cell synchrony the G1 period S period and G2 period follow Subsequent chapters are devoted to activities during cell division cell cycle changes in surface morphology the role of cyclic AMP cAMP and cyclic GMP cGMP in regulation of cell reproduction and changes in nuclear proteins RNA synthesis and enzyme activities during the cell cycle The final chapter covers the genetic analysis of the cell cycle

**Human Genetics for the Social Sciences** Gregory Carey, 2003 There is

a growing awareness of the important role that human genetics plays in individual differences in human behavior Human Genetics for the Social Sciences introduces students of the social and behavioral sciences to the basic biological concepts underscoring the study of genetics Carey explains basic biological concepts while covering principles of genetics evolution and evolutionary psychology and the genetics of individual differences Selective coverage of research in genetics focusing on areas of most relevance to the social sciences enables students to appreciate the role of genetics in everyday human behavior Recommended for social science courses in Human Development Personality Psychology Individual and Family Studies Human Development Education and Sociology Features and Benefits Chapter introductions and highlighted key terms aid student comprehension Text boxes explore issues in depth and figures and tables visually augment text discussion Advanced Topics sections present technical issues at the end of selected chapters Suggested Readings at the end of each chapter to guide students to further information An accompanying fully interactive web site introduces students to basic principles of genetics supplying students with quizzes learning exercises articles on advanced topics in genetics as well as links to a variety of related web resources [Asymmetric Cell Division in Development, Differentiation and Cancer](#) Jean-Pierre Tassin, Jacek Z. Kubiak, 2017-04-12 This book provides readers with an overview of the frequent occurrence of asymmetric cell division Employing a broad range of examples it highlights how this mode of cell division constitutes the basis of multicellular organism development and how its misregulation can lead to cancer To underline such developmental correlations readers will for example gain insights into stem cell fate and tumor growth In turn subsequent chapters include descriptions of asymmetric cell division from unicellular organisms to humans in both physiological and pathological conditions The book also illustrates the importance of this process for evolution and our need to understand the background mechanisms offering a valuable guide not only for students in the field of developmental biology but also for experienced researchers from neighboring fields **Study Guide, Student Edition, for Use with Glencoe Life Science** McGraw Hill, 1998-05 **Glencoe Science** McGraw-Hill Staff, 2001-07-01 [Glencoe Science](#) Alton Biggs, McGraw-Hill Staff, 2001-09 **Macromolecular Protein Complexes V** J. Robin Harris, Jon Marles-Wright, 2024-07-04 This volume in the Subcellular Biochemistry SCBI series is a continuation of several previous volumes devoted to the structural and functional study of protein complexes The expanding nature of this field of study derived mainly from X ray crystallography and electron cryomicroscopy justifies the continuing expansion of coverage in an almost encyclopaedic manner within the SCBI series Experienced and active researchers in the field shed light on the biology of protein complexes involved in important cellular functions from different perspectives such as AcrAB TolC and CST Other topics covered are the Toxin Antitoxin systems in cell survival the role of the ATPases CueR and RUVBL1 RUVBL2 in the regulation of gene expression complexes with multiple functions in the cell such as VCP p97 or the Vault complex FtsA and FtsZ in bacterial cell division GATOR1 and GATOR2 in amino acid sensing TRPA1 and the Serotonin Transporter in signaling oligomeric structures in eukaryotic cells such as

amyloids and invertases among others The book is richly illustrated the result of an impressive integration of structural data from X ray crystallography and cryo electron microscopy Functional aspects of protein protein interactions are also featured prominently providing a valuable contribution for researchers and scholars Chapter 13 is available open access under a Creative Commons Attribution 4 0 International License via link [springer.com](http://springer.com)
