

CHAPTER FIVE

RESEARCH DESIGN AND METHODOLOGY

5.1. Introduction

This chapter discusses in detail the methodological choice and the research design process of the study. It has mainly relied on the philosophical stance and the research problem to guide on the methodological choice. More, specifically, it explains why explanatory sequential mixed methods research approach is considered appropriate for the research. In addition, the chapter set the procedures to collect, analyze and report data. It has used separate procedures for the quantitative and qualitative approach as both encompass distinct purpose to serve. Besides, the approaches implemented to enhance the validity and reliability of the studies are also explained in detail. Finally, the chapter defines procedural issues of the research including the timing, weighting and integration decisions of the study along with pointing considerations for ethical issues.

5.2. Research Design

A research design is the '*procedures for collecting, analyzing, interpreting and reporting data in research studies*' (Creswell & Plano Clark 2007, p.58). It is the overall plan for connecting the conceptual research problems with the pertinent (and achievable) empirical research. In other words, the research design sets the procedure on the required data, the methods to be applied to collect and analyze this data, and how all of this is going to answer the research question (Grey, 2014). As explained by Robson (2002), there are three possible forms of research design: exploratory, descriptive and explanatory. His base of classification relies on the purpose of the research area as each design serves a different end purpose. For instance, the purpose of a descriptive study is to provide a picture of a situation, person or event or show how things are related to each other and as it naturally occurs (Blumberg, Cooper and Schindler, 2005). However, descriptive studies cannot explain why an event has occurred and is much suitable for a relatively new or unexplored research area (Punch, 2005). Therefore, in situation of abundant descriptive information, alternative research designs such as explanatory or exploratory approach is advisable.

The Development of Past Tense Morphology in L2 Spanish M. Rafael Salaberry, 2001-02-12 This book presents an extended analysis of the development of L2 Spanish past tense morphology among L1 English speaking learners The study addresses three major questions 1 what is the developmental pattern of acquisition of past tense verbal morphology among tutored learners 2 what are the relevant factors that may account for the particular distribution of morphological endings especially at the beginning stages and 3 how does instruction affect the movement from one stage to the next The analysis provides a reassessment of the general claim of Andersen s lexical aspect hypothesis and proposes minor changes that may render the hypothesis more appropriate for especially L2 classroom learning The study includes an overview of theoretical positions on the notion of lexical versus grammatical aspect and a comparison of the findings from previous empirical studies on the development of past tense verbal morphology among both classroom and naturalistic learners

Critical Research Design Balazs Szanto, 2025-07-11 This student friendly book demonstrates how to take a critical approach to the research design process to create feasible original and critical research works The author uses a unique model that incorporates three critical review cycles methodological design epistemology and completed research plan in order to ensure that readers have critically engaged with various components of the research proposal Approaching research design as a coherent whole this book focuses on critically understanding how the various components come together as a cohesive and interconnected design as well as to explore how the same basic research idea can lead to a number of different research designs Including sections on both conceptual and methodological designs readers are equipped with the skills and knowledge needed to take a basic research idea and conceptualize a complete and organic design for a research based on it that can make an original contribution to the existing body of knowledge Covering quantitative qualitative and mixed methods approaches and addressing the ethical implications of research this is an essential resource for researchers instructors and students across a

broad range of disciplines in the social and behavioral sciences and humanities *LEADERSHIP AND ORGANISATIONAL PERFORMANCE* Dr. Godwin C. Arikibe, 1901 Leadership is inherent in every being despite one's job profile. But qualitative training and other traits are very important for the right behaviours. Every follower possesses attributes of a leader but because these are somewhat concealed to lead effectively becomes a huge challenge to many. This book is a result of many years of research. It focused on discovering those behavioural attributes that could combine effectively with the leader's competing roles to enhance his performance. A Competing Value Framework (CVF) was applied to understand the leadership behaviours, characteristics, attributes, and roles that could influence a leader even in the face of contingency factors. The result was quite revealing. Leaders that combine their roles with other attributes, skills, achieve behavioural complexity which are performance enhancing behaviours. Furthermore, leaders are distinguished by their unique mental attitude, particularly in four roles: they play motivation, vision, analytic, and task master roles. Combination of these with other attributes and characteristics enhances the leadership complexity. This book is a useful material for those in the ministries, academia, and organisations of different sizes. It's a book every leader must possess to comprehend the behavioural complexities relevant for organisational performance.

A Hypothetical Enhanced Renewable Energy Utilization (EREU) Model for Electricity Generation in Thailand Thomas Andexer, 2008-10-29 Master s Thesis from the year 2008 in the subject Environmental Sciences grade Passed Assumption University of Thailand College of Internet Distance Education CIDE School of Business Administration course Master Thesis Project language English abstract

This thesis presents a research project entitled A Hypothetical Enhanced Renewable Energy Utilization EREU Model for Electricity Generation in Thailand This research is motivated by Thailand s rapidly increasing electricity consumption caused by the country s long standing above average economic growth Consequently the rising electricity demand can only be satisfied by continuously growing electricity imports and thus creating a significant burden to Thailand s national budget Further more Thailand is heavily dependent on natural gas reserves for electricity generation however these are expected to be depleted within only three decades and global price levels for conventional fuels are increasingly volatile with an ascending tendency as well Therefore Thailand faces an urgent need to strategically plan for the broad utilization of domestic renewable energy resources which is essential for a more diversified and thus sustainable electricity generation as well as for the nation s endeavor to become an energy hub within the South East Asian region Under these circumstances this research conducts a comprehensive literature review regarding the past development as well as the current situation of renewable energy utilization in Thailand which concludes in the identification of the importance of renewable energy in the given context and closes with both a distinctive need assessment and a conceptual framework for Thailand s future renewable energy strategy Subsequently the research introduces a unique primary research endeavor in the form of an explorative expert interview survey which succeeds in a substantial collection of qualitative and in depth data These valuable data is first objectively analyzed and second subjectively interpreted and summarized to become the major source for the derivation of a multitude of potential strategic recommendations for an enhanced future renewable energy utilization development in Thailand Finally the entirety of these recommended strategic approaches based on both the secondary and primary research are assembled to develop the Enhanced Renewable Energy Utilization EREU model for electricity generation in Thailand as the fundamental finding of this thesis and research project respectively
