Physical Hazards of the Workplace Larry R. Collins, Thomas D. Schneid, 2001-03-28 The recognition and control of hazards in the work environment is the cornerstone of every company's safety and health plan. There are dangers in every workplace, especially those devoted to technology, machinery, and potentially hazardous material. Employers and their management teams must understand the regulations that provide for facility safety. The successful implementation of these legal standards is required for the profitable and legitimate management of any business. *Physical Hazards of the Workplace* addresses environmental and occupational dangers on the factory floor and in the office. The author explores OSHA, DOT, and other federal, state, and local regulatory compliance codes. He explains how to implement these regulations for the prevention and minimization of the growing number of hazards found in work environments. The author devotes individual chapters to dangers related to machines, the respiratory system, the circulatory system, confined spaces, chemicals, personnel, cumulative trauma, environmental issues, electricity, noise, fire, and explosion, and the risk of falling. One key chapter discusses issues of emergency and disaster preparedness. The useful appendices concisely detail OSHA training requirements, posting standards, and more.

Oxidative

Stress and Dietary Antioxidants in Neurological Diseases Colin R Martin, Victor R Preedy, 2020-06-12 *Oxidative Stress and Dietary Antioxidants in Neurological Diseases* provides an overview of oxidative stress in neurological diseases and associated conditions including behavioral aspects and the potentially therapeutic usage of natural antioxidants in the diet. The processes within the science of oxidative stress are described in concert with other processes such as apoptosis, cell signaling, and receptor-mediated responses. This approach recognizes that diseases are often multifactorial and oxidative stress is a single component of this. The book examines basic processes of oxidative stress from molecular biology to whole organs relative to cellular defense systems and across a range of neurological diseases. Sections discuss antioxidants in foods including plants and components of the diet, examining the underlying mechanisms associated with therapeutic potential and clinical applications. Although some of this material is exploratory or preclinical, it can provide the framework for further in-depth analysis or studies via well-designed clinical trials or the analysis of pathways, mechanisms, and components in order to devise new therapeutic strategies. Very often oxidative stress is a feature of neurological disease and associated conditions which either centers on or around molecular and cellular processes. Oxidative stress can also arise due to nutritional imbalance during a spectrum of timeframes before the onset of disease or during its development. Offers an overview of oxidative stress from molecular biology to whole organs. Discusses the potentially therapeutic usage of natural antioxidants in the patient diet. Provides the framework for further in-depth analysis or studies of potential treatments.
