

Chapter 2

Theoretical Foundations of Collaborative Language Learning

Abstract This chapter reviews the main theoretical orientations in collaborative learning research and discusses the main metaphors on learning from the perspective of learning sciences. Based on this, it elucidates the necessity of shifting from the cognitive perspective to the sociocultural perspective on investigating collaborative second-language learning. All this provide theoretical foundations for analyzing learning taking place in networked second-language learning.

2.1 Social Theories of Learning

Three main theoretical orientations in collaborative learning research are acknowledged to be particularly influential on contemporary computer-supported collaborative learning research (Dillenbourg et al. 1996). They are socio-constructivist theories that extend Piaget's program of cognitive development (Doise and Mugny 1984), Soviet sociocultural theories of learning and development (Vygotsky 1978), and the theory of situated learning (Lave and Wenger 1991). Researchers make a three-pronged distinction among them based on their differences of focus in orientation, methodology, and data.

Influenced by these social theories, working within CSCL certainly acknowledges the importance of the larger social, historical, and cultural context. However, at the earlier stage, it often treats this context as a set of environmental variables that may influence the outcomes of individual student cognition, but are separable from that cognition (Stahl 2011). In this way, cognition is still treated as a function of an individual mind, though social influences are acknowledged (Stahl 2011). This approach is named socio-constructivist (or socio-cognitive) approach.

Dillenbourg et al. (1996) summarize the differences between the socio-constructivist approach built upon the theory of Piaget and the sociocultural approach based on the sociocultural theory of Vygotsky and his colleagues. According to their interpretation, the socio-constructivist approach focuses on individual development in the context of social interaction, as well as the role of interactions with others rather than the actions themselves, while the sociocultural approach focuses on the causal relationship between social interaction and individual cognitive change.

Investigating Chinese HE EFL Classrooms Lin Lin,2014-11-03 This book presents a study on corpus driven distribution as the main method of prediction concentrating on individual semantic features to predict the senses of non defined words by using corpora and tools such as the Chinese Gigaword Corpus HowNet Chinese Wordnet and XianDai HanYu CiDian Xian Han With the help of these corpora the study determines the collocation clusters of four target words chi1 eat wan2 play huan4 change and shao1 burn through character and concept similarities The results of this sense prediction study demonstrate that it was able to use off line tasks to test some participants intuition which supports the theory that different clusters can represent different senses when pursuing a corpus based computational approach Maker Pedagogy Bridget Looney,2025-08-18 Maker pedagogy s focus on democratic participation equity and empowerment extends to school leadership where it calls upon teachers students and those in formal school leadership roles to examine and develop school policies and practices together Beyond the Stars: The Unsung Heroes Who Powered the Space Race David Patterson,2025-12-30 The Space Race captured the world s imagination but behind the astronauts were countless unrecognized minds who made liftoff possible Beyond the Stars shines light on the engineers programmers mathematicians and visionaries men and women alike whose brilliance and grit turned Cold War dreams into cosmic reality From hidden laboratories to mission control rooms this book reveals the personal sacrifices political struggles and scientific breakthroughs that defined a generation Through compelling storytelling and historical insight it uncovers how collaboration courage and quiet genius built humanity s path to the stars reminding us that true exploration begins on Earth with those willing to challenge the impossible Designing Curricula for Learner Autonomy and Engagement Angelos Bollas,Cathryn Bennett,2026-01-01 Designing Curricula for Learner Autonomy and Engagement examines how higher education can be reimagined to empower learners as active self regulated participants in their own development Across seven interconnected chapters the book integrates theory research and practice to explore how autonomy and engagement can be systematically fostered in curriculum design teaching strategies and institutional policy Starting with the conceptual foundations of learner autonomy and self regulated learning the book situates these ideas within the realities of contemporary higher education including digital transformation flexible delivery and post pandemic pedagogical change It repositions notional hours as a learner centred design tool and illustrates their application through a case study of an undergraduate module redesigned to enhance engagement and independent learning Building on these principles the book offers evidence based frameworks for blended and interactive learning design showing how Constructive Alignment Self Determination Theory and Universal Design for Learning can be translated into practical strategies for fostering motivation reflection and meaningful interaction Subsequent chapters address the measurement and enhancement of student engagement introducing ethical inclusive and data informed approaches to assessing behavioural emotional and cognitive participation The discussion extends to

institutional and policy levels exploring how quality assurance systems curriculum governance and professional development can support autonomy oriented innovation Throughout the book emphasises the integration of technological and human dimensions of learning including the emerging influence of generative AI and advocates for pedagogy that is both evidence based and responsive to learners diverse needs Bridging conceptual insight with actionable guidance *Designing Curricula for Learner Autonomy and Engagement* provides educators curriculum designers and policymakers with a coherent framework for creating learning environments that cultivate agency criticality and sustained engagement in an evolving educational landscape
