Classroom Test Construction: The Power of a Table of Specifications

Helenege Fives & Nicole DiDonato-Barnes
Montclair State University

Classroom tests provide teachers with essential information used to make decisions about instruction and student grades. A table of specification (TOS) can be used to help teachers frame the decision making process of test construction and improve the validity of teachers' evaluations based on tests constructed for classroom use. In this article we explain the purpose of a TOS and how to use it to help construct classroom tests.

"But we only talked about Grover Cleveland for – like 2 weeks last week. Why would she put that on the exam?"

"You know how teachers are... they're always trying to trick you."

"Yeah, they find the most nit-picky little details to put on their tests and don't even care if the information is important."

"It's just not fair. I studied everything we discussed in class about the Gilded Age and the things she made a big deal about, like comparing the industrialized north to the agriculture in the south. I really thought I understood what was going on – how the U.S. economy and way of life changed with industry, railroads, and unions. And to think all she asked was 'What was the South's economic base!' Oh and 'What were Grover Cleveland's terms as president?' Really? Grr."

As a student have you ever felt that the test you studied for was completely or partially unrelated to the class activities you experienced? As a teacher have you ever heard these complaints from students? This is not an uncommon experience in most classrooms. Frequently there is both a real and perceived mismatch between the content examined in class and the material assessed on an end of chapter/unit test. This lack of coherence leads to a test that fails to provide evidence from which teachers can make valid judgments about students' progress (Brookhart, 1999). One strategy teachers can use to mitigate this problem is to develop a Table of Specifications (TOS).

What is a Table of Specifications?

A TOS, sometimes called a test blueprint, is a table that helps teachers align objectives, instruction, and assessment (e.g., Notar, Zuelke, Wilson, & Yunker, 2004). This strategy can be used for a variety of assessment methods but is most commonly associated with constructing traditional summative tests. When constructing a test, teachers need to be concerned that the test measures an adequate sampling of the class content at the cognitive level that the material was taught. The TOS can help teachers map the amount of class time spent on each objective with the cognitive level at which each objective was taught thereby helping teachers to identify the types of items they need to include on their tests. There are many approaches to developing and using a TOS advocated by measurement experts (e.g., Anderson, Krathwohl, Airasian, Cruikshank, Mayer, Pintrich, Raths, & Wittrock, 2001; Gronlund, 2006; Reynolds, Livingston, & Wilson, 2006).

In this article, we describe one approach to using a TOS developed for practical classroom application. Our approach to the TOS is intended to help classroom teachers develop summative assessments that are well aligned to the subject matter studied and the cognitive processes used during instruction. However, for this strategy to be helpful in your teaching practice, you need to make it your own and
