automation and the increased sophistication of artificial intelligence in conjunction with the cloud and how this growth will eventually lead to technological unemployment Some economists are predicting up to a 50% job loss or more Predicting the future typically means extrapolating the past It often fails to anticipate breakthroughs But it is precisely those unpredictable breakthroughs in computing that could have the biggest impact on the workforce Education and up skilling current workers will be the only way to ensure continued relevance within an automated workforce By focusing on education it will ensure people are best placed to take advantage of this new age of advanced automation This dissertation concludes that innovation through creativity will ensure employment opportunities continue to present themselves to those best prepared for such changes
