

# A Simple AI Generator Project Using HTML, CSS, and JavaScript

This presentation introduces a straightforward AI generator project, ideal for developers looking to learn the basics of artificial intelligence. We will explore building a simple AI model using HTML, CSS, and JavaScript, and then we'll guide you step by step through the process, from the initial setup to deploying a fully functional application. We'll focus on simplicity and clarity, ensuring that the code is easy to follow, even for developers with limited experience in AI. This project offers a practical introduction to the exciting world of AI and how it can be integrated into web development projects.

## What is an AI Generator?

### The Basics

AI generators leverage sophisticated algorithms trained on massive datasets to produce novel content, encompassing images, text, music, and more. These algorithms identify intricate patterns and underlying relationships within the data, enabling them to generate outputs that are similar in style but unique in their specifics. This process mimics human creativity but operates through mathematical models and statistical probabilities.

### Applications

The applications of AI generators are remarkably diverse and rapidly expanding. In the realm of visual arts, they produce photorealistic images and compelling abstract art, offering tools for artists and designers. Text generation capabilities extend from creative writing (poems, scripts, articles) to more practical tasks such as summarization, translation, and code generation. In music, AI can compose original scores, adapting to various styles and genres. Beyond these, AI finds application in areas like drug discovery, materials science, and software development, greatly increasing efficiency and exploration of design spaces.

**Invocational Media** Chris Chesher,2023-10-19 Invocational Media critiques the sociotechnical power of digital technologies by introducing the concept of invocational media What is an invocation Ask your voice assistant and it will define it for you It is a media artefact that responds to many invocations such as seeking the weather forecast requesting any song you can name or turning on the lights almost magically This contemporary manifestation of the ancient practice of invocation gives an immediate response to your call in a way that Chris Chesher argues is the characteristic power of all computers which he redefines as invocational media This book challenges the foundations of computer science by offering invocation as a powerful new way of conceptualising digital technologies Drawing on media philosophy Deleuze Guattari Heidegger Latour Austin Innis and McLuhan it critiques the representationalism of data processing artificial intelligence and virtual reality Invocational media seem to empower individuals but necessarily subject users to corporate and government monopolies of invocation They offer many solutions but only by reducing everything to the same kind of act They complicate agency in their indifference as to whether invocers are human or non human With robotics they invoke material form to act physically and autonomously People willingly make themselves invocable to surveillance and control by creating their own profiles and marking themselves with biometrics This ground breaking book will change how you think about digital media by showing they are in fact invocational media
