

### The Problem

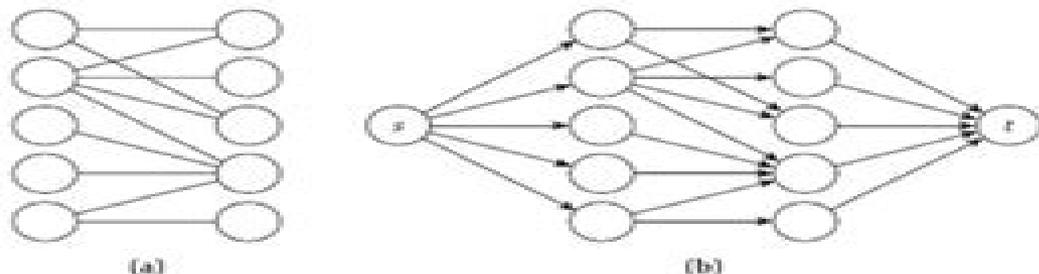

One of our original goals in developing the Maximum-Flow Problem was to be able to solve the Bipartite Matching Problem, and we now show how to do this. Recall that a *bipartite graph*  $G = (V, E)$  is an undirected graph whose node set can be partitioned as  $V = X \cup Y$ , with the property that every edge  $e \in E$  has one end in  $X$  and the other end in  $Y$ . A *matching*  $M$  in  $G$  is a subset of the edges  $M \subseteq E$  such that each node appears in at most one edge in  $M$ . The Bipartite Matching Problem is that of finding a matching in  $G$  of largest possible size.

### Designing the Algorithm

The graph defining a matching problem is undirected, while flow networks are directed; but it is actually not difficult to use an algorithm for the Maximum-Flow Problem to find a maximum matching.

Beginning with the graph  $G$  in an instance of the Bipartite Matching Problem, we construct a flow network  $G'$  as shown in Figure 7.9. First we direct all edges in  $G$  from  $X$  to  $Y$ . We then add a node  $s$ , and an edge  $(s, x)$  from  $s$  to each node in  $X$ . We add a node  $t$ , and an edge  $(y, t)$  from each node in  $Y$  to  $t$ . Finally, we give each edge in  $G'$  a capacity of 1.

We now compute a maximum  $s$ - $t$  flow in this network  $G'$ . We will discover that the value of this maximum is equal to the size of the maximum matching in  $G$ . Moreover, our analysis will show how one can use the flow itself to recover the matching.

**Figure 7.9** (a) A bipartite graph. (b) The corresponding flow network, with all capacities equal to 1.

**Green IT: Technologies and Applications** Jae H. Kim, Myung J. Lee, 2011-07-25 This book is the first of its kind in presenting comprehensive technical issues and solutions for rapidly growing Green IT. It brings together in a single volume both green communications and green computing under the theme of Green IT and presents exciting research and developments taking place therein in a survey style. Written by the subject matter experts consisting of an international team of recognized researchers and practitioners in the field, Green IT Technologies and Applications will serve as an excellent source of information on the latest technical trend of Green IT for graduate undergraduate students, researchers, engineers, and engineering managers in the IT, Electrical, Communications, Computer Engineering, Computer Science, Information Science, as well as interdisciplinary areas such as sustainability, environment, and energy. The book comprises three parts: Green Communications, Green Computing, and Smart Grid and Applications. Part I, Green Communications, deals with energy efficient architectures and associated performance measures in wireless communications. It covers energy issues in PHY, MAC, Routing, Application layers, and their solutions for a variety of networks. Part II, Green Computing, deals with various energy issues in data centers, computing clusters, computing storage, and associated optimization techniques. Energy management strategies are presented to balance between energy efficiency and required qualities of services. Part III, Smart Grid and Applications, presents an overview and research challenges for smart grid. Applications include modeling of urban pollutant for transportation networks, Wireless Sensor Network (WSN) architecture with long range radio, and Green IT standards.

The book is suitable either as a textbook or as a supplementary book in algorithm courses. Over 400 computational problems are covered with various algorithms to tackle them. Rather than providing students simply with the best known algorithm for a problem, this book presents various algorithms for readers to master various algorithm design paradigms. Beginners in computer science can train their algorithm design skills via trivial algorithms on elementary problems.

examples Graduate students can test their abilities to apply the algorithm design paradigms to devise an efficient algorithm for intermediate level or challenging problems Key Features includes followings

- 1 Dictionary of Computational Problems A table of over 400 computational problems with more than 1500 algorithms is provided
- 2 Indices and Hyperlinks Algorithms computational problems equations figures lemmas properties tables and theorems are indexed with unique identification numbers and page numbers in the printed book and hyperlinked in the e book version
- 3 Extensive Figures Over 435 figures illustrate the algorithms and describe computational problems
- 4 Comprehensive Exercises More than 352 exercises help students to improve their algorithm design and analysis skills The answers for most questions are available in the accompanying solution manual
