[An Introduction to Statistical Learning](#) Gareth James, Daniela Witten, Trevor Hastie, Robert Tibshirani, Jonathan Taylor, 2023-06-30 An Introduction to Statistical Learning provides an accessible overview of the field of statistical learning an essential toolset for making sense of the vast and complex data sets that have emerged in fields ranging from biology to finance marketing and astrophysics in the past twenty years This book presents some of the most important modeling and prediction techniques along with relevant applications Topics include linear regression classification resampling methods shrinkage approaches tree based methods support vector machines clustering deep learning survival analysis multiple testing and more Color graphics and real world examples are used to illustrate the methods presented This book is targeted at statisticians and non statisticians alike who wish to use cutting edge statistical learning techniques to analyze their data Four of the authors co wrote An Introduction to Statistical Learning With Applications in R ISLR which has become a mainstay of undergraduate and graduate classrooms worldwide as well as an important reference book for data scientists One of the keys to its success was that each chapter contains a tutorial on implementing the analyses and methods

presented in the R scientific computing environment However in recent years Python has become a popular language for data science and there has been increasing demand for a Python based alternative to ISLR Hence this book ISLP covers the same materials as ISLR but with labs implemented in Python These labs will be useful both for Python novices as well as experienced users

*Machine Learning* RODRIGO F MELLO, Moacir Antonelli Ponti, 2018-08-01 This book presents the Statistical Learning Theory in a detailed and easy to understand way by using practical examples algorithms and source codes It can be used as a textbook in graduation or undergraduation courses for self learners or as reference with respect to the main theoretical concepts of Machine Learning Fundamental concepts of Linear Algebra and Optimization applied to Machine Learning are provided as well as source codes in R making the book as self contained as possible It starts with an introduction to Machine Learning concepts and algorithms such as the Perceptron Multilayer Perceptron and the Distance Weighted Nearest Neighbors with examples in order to provide the necessary foundation so the reader is able to understand the Bias Variance Dilemma which is the central point of the Statistical Learning Theory Afterwards we introduce all assumptions and formalize the Statistical Learning Theory allowing the practical study of different classification algorithms Then we proceed with concentration inequalities until arriving to the Generalization and the Large Margin bounds providing the main motivations for the Support Vector Machines From that we introduce all necessary optimization concepts related to the implementation of Support Vector Machines To provide a next stage of development the book finishes with a discussion on SVM kernels as a way and motivation to study data spaces and improve classification results
