**Proceedings of the Fifth International Conference on Trends in Computational and Cognitive Engineering** M. Shamim Kaiser, Raghvendra Singh, Anirban Bandyopadhyay, Mufti Mahmud, Kanad Ray, 2025-07-04 This book presents various computational and cognitive modeling approaches in the areas of health education finance environment engineering commerce and industry It is a collection of selected conference papers presented at the 5th International Conference on Trends in Cognitive Computation Engineering TCCE 2023 organized by Pranveer Singh Institute of Technology Kanpur Uttar Pradesh India in collaboration with IIOIR Shimla Himachal Pradesh India during 24 25 November 2023 The book is divided

into two volumes and it shares cutting edge insights and ideas from mathematicians engineers scientists and researchers and discusses fresh perspectives on problem solving in a range of research areas **Farey Sequences** Andrey O.

Matveev,2017-11-07 As a first comprehensive overview on Farey sequences and subsequences this monograph is intended as a reference for anyone looking for specific material or formulas related to the subject Duality of subsequences and maps between them are discussed and explicit proofs are shown in detail From the Content Basic structural and enumerative properties of Farey sequences Collective decision making Committee methods in pattern recognition Farey duality Farey sequence Fundamental Farey subsequences Monotone bijections between Farey subsequences *The Role of the History of Mathematics in the Teaching/Learning Process* Sixto Romero Sanchez,Ana Serradó Bayés,Peter Appelbaum,Gilles Aldon,2023-06-15

This volume presents multiple perspectives on the uses of the history of mathematics for teaching and learning including the value of historical topics in challenging mathematics tasks for provoking teachers reflection on the nature of mathematics curriculum development questions that mirror earlier pedagogical choices in the history of mathematics education and the history of technological innovations in the teaching and learning of mathematics An ethnomathematical perspective on the history of mathematics challenges readers to appreciate the role of mathematics in perpetuating consequences of colonialism Histories of the textbook and its uses offer interesting insights into how technology has changed the fundamental role of curriculum materials and classroom pedagogies History is explored as a source for the training of teachers for good puzzles and problems and for a broad understanding of mathematics education policy Third in a series of sourcebooks from the International Commission for the Study and Improvement of Mathematics Teaching this collection of cutting edge research stories from the field and policy implications is a contemporary and global perspective on current possibilities for the history of mathematics for mathematics education This latest volume integrates discussions regarding history of mathematics history of mathematics education and history of technology for education that have taken place at the Commission s recent annual conferences

**Diophantine Equations and Systems** Demetrios P Kanoussis Ph D,2024-03-08 Diophantine equations are polynomial equations with integer coefficients for which only integer solutions are sought In his great work Arithmetica the Greek mathematician Diophantus of Alexandria born in Alexandria Egypt in 200 AD and died in 284 AD known as the father of Algebra studied and solved such types of equations integer coefficients and integer solutions of the first up to the fourth degree These equations are now known as Diophantine equations A characteristic feature of Diophantine equations is that in these equations the number of equations is smaller than the number of unknowns For example we may have one equation with two unknowns or one equation with three unknowns or a system of two equations with three unknowns etc While in the set of real numbers  $\mathbb{R}$  these types of equations fewer equations than number of unknowns are indeterminate in the set of integers  $\mathbb{Z}$   $3x + 2y = 1$  or  $2x + 3y = 1$  or in the set of natural numbers  $\mathbb{N}$   $x + 2y = 3$  or  $x + 2y = 4$  these equations may or may not have integer solutions depending on the coefficients of the equations In this book we provide a

systematic introduction to Diophantine equations with emphasis on the solution of various problems The first two chapters are devoted to first degree Diophantine equations and systems linear equations and systems while the third chapter is devoted to second degree Diophantine equations and systems Among other equations in this chapter we study the Pythagorean equation  $x^2 + y^2 = z^2$  and the Pell's equation  $x^2 - ky^2 = 1$  The solution of Pell's equation is achieved by a really brilliant method which is attributed to Lagrange Various examples of higher degree Diophantine equations are considered in chapter 4 The analytic description of the material covered in this book can be found in the table of contents The book is concluded with a collection of 40 miscellaneous challenging problems with answers and detailed remarks and hints In total the book contains 55 solved examples and 105 problems for solution
