14. What is the most important function of the lymph nodes?
 - Filtering hazardous substances and waste products is the job of the lymph nodes. They also contain lymphocytes, which are immune cells capable of eliminating cancer cells and germs. The filtered fluid is then put into the bloodstream. If you have an infection or cancer, a lymph node may swell.
15. Compare and contrast blood, interstitial fluid, and lymph.
 - Blood delivers nutrition, wastes, and gases throughout the body. It exchanges components with the interstitial fluid as it flows through the blood vessels. While blood filtration produces interstitial fluid, it is the fluid that surrounds body cells in tissue spaces and is necessary for the plasma. Finally, lymph is a protein-rich fluid that penetrates lymphatic capillaries and has the same makeup as interstitial fluid.
16. Where would you find Peyer's patches and the appendix? What are their functions?
 - Peyer's patches are small masses of lymphatic tissue found throughout the area of the small intestine. They're also known as aggregated lymphoid nodules, and an important part of the immune system because they keep track of intestinal bacteria populations and keep bacteria from proliferating in the intestines. The appendix absorbs antigens from the contents of the intestines and reacts to them, similar to Peyer's patches in other parts of the gastrointestinal system.
17. Besides acting as mechanical barriers, the skin and mucosae of the body contribute to body protection in other ways. Cite the common body locations and the importance of mucus, lysozyme, keratin, acid pH, and cilia.
 - Mucus traps microorganisms in the respiratory and digestive tracts. Lysozyme is found in tears and acts as an enzyme that destroys bacteria. Keratin is commonly found in tissues such as hair, nails, and the epidermis of the skin and thus acts as a tough, insoluble protein. The acidic pH of skin secretions and usually urine inhibits bacterial growth. Cilia found in the respiratory passages and propel debris-laden mucus away from lower respiratory passages.
18. What is complement? Besides bacterial lysis, what are some of the roles of complement?
 - Complement is a plasma protein group and it enhances phagocytosis, as well as inflammatory and immunological responses, in addition to bacterial destruction.
19. Why is the term "swollen glands" a misnomer in the case of an infection?
 - The term "swollen glands" refers to enlargement of one or more lymph nodes. The medical name for swollen lymph nodes is lymphadenopathy.
20. Define immune response.
 - Immune response to the presence of foreign substances. The connective tissue is the main source of immunological response.
21. What happens to pathogens during phagocytosis?
