Al Sharkawy,Veysel Demir,Atef Z. Elsherbeni,2007-06-01 In this work an iterative approach using the finite difference frequency domain method is presented to solve the problem of scattering from large scale electromagnetic structures The idea of the proposed iterative approach is to divide one computational domain into smaller subregions and solve each subregion separately Then the subregion solutions are combined iteratively to obtain a solution for the complete domain As a result a considerable reduction in the computation time and memory is achieved This procedure is referred to as the iterative multiregion IMR technique Different enhancement procedures are investigated and introduced toward the construction of this technique These procedures are the following 1 a hybrid technique combining the IMR technique and a method of moment technique is found to be efficient in producing accurate results with a remarkable computer memory saving 2 the IMR technique is implemented on a parallel platform that led to a tremendous computational time saving 3 together the multigrid technique and the incomplete lower and upper preconditioner are used with the IMR technique to speed up the convergence rate of the final solution which reduces the total computational time Thus the proposed iterative technique in conjunction with the enhancement procedures introduces a novel approach to solving large open boundary electromagnetic problems including unconnected objects in an efficient and robust way Contents Basics of the FDFD Method IMR Technique for Large Scale Electromagnetic Scattering Problems 3D Case IMR Technique for Large Scale Electromagnetic Scattering Problems 2D Case The IMR Algorithm Using a Hybrid FDFD and Method of Moments
