Engineering RAM BABU SAO, 2025-03-23. It gives me great pleasure and sense of deep satisfaction to publish this book of Introduction to Piping Engineering. You can learn how to design, material selection, and testing, fabrication, erection, construction, inspections, and quality control of pipe, along with weld joints, detail joint preparation, pipe cutting, joints, fit-up, welding of pipe, pipe supports, and steel structural platforms, fabrication, and installation, etc., and teach yourself to be a master of the process piping construction with the step-by-step instructions and quality control. It provides all the information about tools and equipments being used in the piping construction work. An engineer is the tradesperson who is busy in fabrication, installation, assembly, testing, maintenance, and repair of process piping systems. Fresh Piping engineer usually begins as apprentices and deals with industrial, commercial, marine piping, and process piping systems. Typical industrial process pipe works under high pressure and temperature and requires metals such as carbon steel, stainless steel, alloy steel, cupronical, and many different alloying metals fused together through precise cutting, threading, grooving, bending, and welding. Piping engineer plan and test piping and tubing layouts, cut, bend, or fabricate pipe or tubing segments, and joints of those segments by threading, welding, brazing, cementing, or soldering them together. They check the installation of manual, pneumatic, hydraulic, and electric operated valves on pipes to control the flow through the pipes or tubes. They carry out testing and inspection of the piping system. Piping engineers are often exposed to hazardous or dangerous materials such as asbestos, lead, ammonia, steam, flammable gases, various resins, and solvents, including benzene and various refrigerants. Much progress was made in the 20th century toward eliminating or reducing hazardous materials exposures. Many aspects of hazardous

materials are now regulated by law in most countries including asbestos usage and removal and refrigerant selection and handling Other occupational hazards include exposure to the weather heavy lifting crushing hazards lacerations and other risks normal to the construction industry This book has proved to be a friend and guide to many Piping engineer Contractors and Technicians working with any Construction or Consultants Companies who are responsible for Laying out assembling or installation of piping systems pipe supports applying their knowledge of construction experience following blueprints and select the type and size of pipe related materials and equipment such as supports hangers and hydraulic cylinders according to piping drawings and specifications Piping engineers are the main technical professionals who are responsible to deliver the quality job of piping work and they should have sufficient knowledge of Piping Engineering subject This will result in improving the general quality levels of a Piping engineer in this direction leading to a greater satisfaction in work This book is taking a lead in upgrading the awareness knowledge of various matters related with piping work benefiting Piping engineers working in the field of piping work The total practical approach of this book explodes the statistical data on mathematics physics chemistry and engineering that even the piping engineering subject is tough and difficult to understand a general reader or beginners willing to know about the subject will find the content very easy and simple to follow I hope that the excellence of this book will be appreciated by the readers from all parts of India and abroad
