Performance and QoS of Next Generation Networking Kunio Goto,Toshiharu

Hasegawa,Hideaki Takagi,Yutaka Takahashi,2012-12-06 The advancement of key technologies in communication such as optical and radio transmission coding schemes switching mechanisms etc has meant that communication networks are quickly growing to a larger scale and higher speed than was ever anticipated In terms of usage Internet and real time applications are expected to share a significant portion of the bandwidth in the next generation of communication networks

Therefore in order to achieve seamless and Quality of Service QoS guaranteed transmission regardless of source characteristics extensive research into networking technologies is essential For the proper design development and operation of emerging ideas on networking further studies on the performance modeling and evaluation of networking are also encouraged The International Conference on the Performance and QoS of Next Generation Networking P 1988 1991 and 1994 in Kyoto 1997 in Tsukuba The conference is sponsored by the International Federation of Information Processing IFIP Working Group WG 6.3 Performance of Communication Systems 6.4 High Performance Networking and 7.3 Computer System Modelling Financial supports are given by Commemorative Association for the Japan World Exposition 1970 Support Center for Advanced Telecommunications Technology Research and Nanzan University *Advanced Information Networking and Applications* Leonard Barolli,2024-04-09 Networks of today are going through a rapid evolution and there are many emerging areas of information networking and their applications Heterogeneous networking supported by recent technological advances in low power wireless communications along with silicon integration of various functionalities such as sensing communications intelligence and actuations are emerging as a critically important disruptive computer class based on a new platform networking structure and interface that enable novel low cost and high volume applications Several of such applications have been difficult to realize because of many interconnection problems To fulfill their large range of applications different kinds of networks need to collaborate and wired and next generation wireless systems should be integrated in order to develop high performance computing solutions to problems arising from the complexities of these networks This book covers the theory design and applications of computer networks distributed computing and information systems The aim of the book *Advanced Information Networking and Applications* is to provide latest research findings innovative research results methods and development techniques from both theoretical and practical perspectives related to the emerging areas of information networking and applications *Performability Models and Solutions* David G. Furchgott,1984 *UMAP Modules* ,1991 Practical Performance Modeling Khalid Begain,Gunter Bolch,Helmut Herold,2012-12-06 Practical Performance Modeling Application of the MOSEL Language introduces the new and powerful performance and reliability modeling language MOSEL Modeling Specification and Evaluation Language developed at the University of Erlangen Germany MOSEL facilitates the performance and reliability modeling of a computer communication manufacturing or workflow management system in a very intuitive and simple way The core of MOSEL consists of constructs to specify the possible states and state transitions of the system under consideration This specification is very compact and easy to understand With additional constructs the interesting performance or reliability measures and graphical representations can be specified With some experience it is possible to write down the MOSEL description of a system immediately only by knowing the behavior of the system under study There are no restrictions unlike models using for example queueing networks Petri nets or fault trees MOSEL fulfills all the requirements for a universal modeling language It

is high level system oriented and usable It is open and can be integrated with many tools By providing compilers which translate descriptions specified in MOSEL into the tool specific languages all previously implemented tools with their different methods and algorithms including simulation can be used Practical Performance Modeling Application of the MOSEL Language provides an easy to understand but nevertheless complete introduction to system modeling using MOSEL and illustrates how easily MOSEL can be used for modeling real life examples from the fields of computer communication and manufacturing systems Practical Performance Modeling Application of the MOSEL Language will be of interest to professionals and students in the fields of performance and reliability modeling in computer science communication and manufacturing It is also well suited as a textbook for university courses covering performance and reliability modeling with practical applications

ACM SIGMETRICS and Performance ... International Conference on Measurement and Modelling. Proceedings ,1992

Computer Performance and Reliability Giuseppe G. Iazeolla, Pierre Jacques Courtois, O. J. Boxma, 1988 The MCPR Workshop is an interdisciplinary computer science mathematics event It takes place once very fourth year and is aimed at evaluating the latest progress in modeling techniques in the area of performance and reliability engineering of computer communication systems Like its predecessor the workshop from which these papers originate aimed at stimulating the exchange of ideas and experience among scientists active in mathematics research relevant to performance and reliability aspects of the design of computer and communication systems The spirit of these exchanges and the main issues at stake are defined by an unceasing and difficult quest for models and techniques which are in the interests of mathematical tractability and accuracy and at the same time allow for enough realism so as to yield results which are pertinent to system designers This was reflected in the present program which proposed a balanced and varied mixture of approximation techniques of simulation methods and of analytical results on queueing matrix and Petri net models

Queueing Networks Richard J. Boucherie, Nico M. van Dijk, 2010-11-25 This handbook aims to highlight fundamental methodological and computational aspects of networks of queues to provide insights and to unify results that can be applied in a more general manner The handbook is organized into five parts Part 1 considers exact analytical results such as of product form type Topics include characterization of product forms by physical balance concepts and simple traffic flow equations classes of service and queue disciplines that allow a product form a unified description of product forms for discrete time queueing networks insights for insensitivity and aggregation and decomposition results that allow sub networks to be aggregated into single nodes to reduce computational burden Part 2 looks at monotonicity and comparison results such as for computational simplification by either of two approaches stochastic monotonicity and ordering results based on the ordering of the process generators and comparison results and explicit error bounds based on an underlying Markov reward structure leading to ordering of expectations of performance measures Part 3 presents diffusion and fluid results It specifically looks at the fluid regime and the diffusion regime Both of these are illustrated through fluid limits for the analysis

of system stability diffusion approximations for multi server systems and a system fed by Gaussian traffic Part 4 illustrates computational and approximate results through the classical MVA mean value analysis and QNA queueing network analyzer for computing mean and variance of performance measures such as queue lengths and sojourn times numerical approximation of response time distributions and approximate decomposition results for large open queueing networks spanPart 5 enlightens selected applications as spanloss networks originating from circuit switched telecommunications applications capacity sharing originating from packet switching in data networks and a hospital application that is of growing present day interest spanThe book shows that spanthe intertwined progress of theory and practicespan will remain to be most intriguing and will continue to be the basis of further developments in queueing networks

Dependability of Networked Computer-based Systems Ajit Kumar Verma, Srividya Ajit, Manoj Kumar, 2011-07-21 The measurement of dependability attributes on real systems is a very time consuming and costly affair making analytical or simulation modeling the only viable solutions Dependability of Networked Computer based Systems explores reliability availability and safety modeling of networked computer based systems used in life critical applications such as avionics nuclear power plants automobiles and chemical process industries Dependability of Networked Computer based Systems gives an overview of basic dependability modeling concepts and addresses new challenges in dependability modeling of networked computer based systems as well as new trends their capabilities and limitations It covers a variety of dependability modeling methods stochastic processes Markov and semi Markov models response time distribution stochastic Petri net based modeling formalisms and Monte Carlo simulation models Dependability of Networked Computer based Systems provides students and researchers with a detailed overview of dependability models and analysis techniques Practicing engineers will also find this text a useful guide to decision making based on system dependability at the design operation and maintenance stages
