### **An Introduction to Metal Matrix Composites** T. W.

Clyne, P. J. Withers, 1993 Metal matrix composites constitute a new class of materials now starting to make a major industrial impact in fields as diverse as aerospace, automobiles and electronics. This book gives a comprehensive integrated coverage of these materials including the background to analytical, experimental, production and application oriented aspects. Clear pictorial descriptions are given of the basic principles governing various properties and characteristics; these encompass mechanical, thermal, electrical, environmental and wear behaviour. Coverage also extends to material processing and component fabrication aspects and to a survey of commercial usage. This book is aimed primarily at scientists, engineers, production managers and all those involved in research on new materials in general and metal matrix composites in particular but may also be suitable for use as a text in beginning graduate and advanced undergraduate courses.
