

Network Design & Implementation Checklist

- Network Justification**

All decisions related to network design must be justified as necessary and/or optimal. Based on the applications used in a network, the network is typically designed using the existing (or new) channels of communication that are available (or need to be created).
- Network Scope**

The applications used and the common carriers that facilitate communication. The scope is based on any external geographic location as well as any location internal to any one site.
- Network Manageability**

The extent to which the network is capable of meeting the needs of its users: variability in traffic levels is maximized using slack to afford the entire network the most optimal performance. Constant tuning and performance tracking is discouraged to prevent overhead and excessive traffic at peak times.
- Network Architecture**
 - Local Area Network (LAN)
 - Metropolitan Area Network (MAN)
 - Wide Area Network (WAN)
 - Other available communications media
- Network Switch Mode**
 - Circuit switching method, or possible packet switching, circuit switching, or hybrid switching
- Network Node Location**
 - Nodes must be placed that are optimal to the entire network: locate nodes, switches, routers based on the source and destination of traffic, other nodes being, high traffic nodes should be located in an area where network performance can easily maintain them.
