Green Analytical Chemistry Mihkel Koel, Mihkel Kaljurand, 2019-03-13 Chemical analysis requires solvents reagents and energy and generates waste The main goal of green analytical chemistry is to avoid or reduce the undesirable environmental side effects of chemical analysis while preserving the classic analytical parameters of accuracy sensitivity selectivity and precision This book portrays the current and changing situation concerning adoption of the principles of green chemistry as applied to analysis It begins by looking at the advantages of and problems associated with on site analysis and how analytical

techniques can lead to increased productivity efficiency and accuracy and thereby reduce the consumption of materials It then focuses on sample preparation techniques minimising solvent consumption or using alternative solvents concepts and methods of improving the greenness of instrumental analysis where miniaturization is an important part separation methods from the perspective of green analytical chemistry and chemometrics approaches which can reduce or can even remove the need for conventional steps in chemical analysis Aimed at graduates and novices just entering the field managers of analytical research laboratories teachers of analytical chemistry and green public policy makers this title will be a useful addition to any analytical scientist s library
