

The background of the cover is a dark, high-contrast microscopic image. It shows a large, bright red, circular structure in the center, which appears to be a cell or a specific tissue component. To the left, there are several smaller, rounded, reddish structures. The overall texture is grainy and detailed, typical of a scanning electron micrograph or a high-magnification light micrograph. The colors are primarily dark red, black, and white.

An Introduction to Tissue-Biomaterial Interactions Kay C. Dee, David A. Puleo, Rena Bizios, 2003-03-31 An Introduction to Tissue Biomaterial Interactions acquaints an undergraduate audience with the fundamental biological processes that influence these sophisticated cutting edge procedures Chapters one through three provide more detail about the molecular level events that happen at the tissue implant interface while chapters four through ten explore selected material biological and physiological consequences of these events The importance of the body's wound healing response is emphasized throughout Specific topics covered include Structure and properties of biomaterials Proteins Protein surface interactions Blood biomaterial interactions Inflammation and infection The immune system Biomaterial responses to implantation Biomaterial surface engineering Intimal hyperplasia and osseointegration as examples of tissue biomaterial interactions The text also provides extensive coverage of the three pertinent interfaces between the body and the biomaterial between the body and the living cells and between the cells and the biomaterial that are critical in the development of tissue engineered products that incorporate living cells within a biomaterial matrix Ideal for a one semester biomedical engineering course An Introduction to Tissue Biomaterial Interactions provides a solid framework for understanding today's and tomorrow's implantable biomedical devices
