Artificial Intelligence and Universal Values Jay Friedenberg,2024-07-14 The field of value alignment or more broadly machine ethics is becoming increasingly important as artificial intelligence developments accelerate By alignment we mean giving a generally intelligent software system the capability to act in ways that are beneficial or at least minimally harmful to humans There are a large number of techniques that are being experimented with but this work often fails to specify what values exactly we should be aligning When making a decision an agent is supposed to maximize the expected utility of its value function Classically this has been referred to as happiness but this is just one of many things that people value In order to resolve this issue we need to determine a set of human values that represent humanity s interests Although this problem might seem intractable research shows that people of various cultures and religions actually share more in common than they realize In this book we review world religions moral philosophy and evolutionary psychology to elucidate a common set of shared values We then show how these values can be used to address the alignment problem and conclude with problems and goals for future research The key audience for this book will be researchers in the field of ethics and artificial intelligence who are interested in or working on this problem These people will come from various professions and include philosophers computer programmers and psychologists as the problem itself is multi disciplinary *SEO Mastery Playbook Next-Gen Tools & Strategies, AI-Powered Future of Search for Winning in AI Era* Karminder Ghuman, PhD & Raj

[Invocational Media](#) Chris Cheshier, 2023-10-19. *Invocational Media* critiques the sociotechnical power of digital technologies by introducing the concept of invocational media. What is an invocation? Ask your voice assistant, and it will define it for you. It is a media artefact that responds to many invocations, such as seeking the weather forecast, requesting any song you can name, or turning on the lights almost magically. This contemporary manifestation of the ancient practice of invocation gives an immediate response to your call in a way that Chris Cheshier argues is the characteristic power of all computers, which he redefines as invocational media. This book challenges the foundations of computer science by offering invocation as a powerful new way of conceptualising digital technologies. Drawing on media philosophy (Deleuze, Guattari, Heidegger, Latour, Austin, Innis, and McLuhan), it critiques the representationalism of data processing, artificial intelligence, and virtual reality. Invocational media seem to empower individuals but necessarily subject users to corporate and government monopolies of invocation. They offer many solutions but only by reducing everything to the same kind of act. They complicate agency in their indifference as to whether invokers are human or non-human. With robotics, they invoke material form to act physically and autonomously. People willingly make themselves invocable to surveillance and control by creating their own profiles and marking themselves with biometrics. This ground-breaking book will change how you think about digital media by showing they are, in fact, invocational media.
