*Ultimate Limit State Design of Steel-Plated Structures* Jeom Kee Paik, Anil Kumar Thayamballi, 2003-03-28 Steel plated structures are important in a variety of marine and land based applications including ships offshore platforms power and chemical plants box girder bridges and box girder cranes The basic strength members in steel plated structures include support members such as stiffeners and plate girders plates stiffened panels grillages and box girders During their lifetime the structures constructed using these members are subjected to various types of loading which is for the most part operational but may in some cases be extreme or even accidental Ultimate Limit State Design of Steel Plated Structures reviews and describes both fundamentals and practical design procedures in this field The derivation of the basic mathematical expressions is presented together with a thorough discussion of the assumptions and the validity of the underlying expressions and solution methods Particularly valuable coverage in the book includes Serviceability and the ultimate limit state design of steel structural systems and their components The progressive collapse and the design of damage tolerant structures in the context of marine accidents Age related structural degradation such as corrosion and fatigue cracks Furthermore this book is also an easily accessed design tool which facilitates learning by applying the concepts of the limit states for practice using a set of computer programs which can be downloaded In addition expert guidance on mechanical model test results as well as nonlinear finite element solutions sophisticated design methodologies

useful for practitioners in industries or research institutions selected methods for accurate and efficient analyses of nonlinear behavior of steel plated structures both up to and after the ultimate strength is reached is provided Designed as both a textbook and a handy reference the book is well suited to teachers and university students who are approaching the limit state design technology of steel plated structures for the first time The book also meets the needs of structural designers or researchers who are involved in civil marine and mechanical engineering as well as offshore engineering and naval architecture

**ANSYS Tutorial Release 12.1** Kent L. Lawrence, 2010 The nine lessons in this book introduce the reader to effective finite element problem solving by demonstrating the use of the comprehensive ANSYS FEM Release 12.1 software in a series of step by step tutorials The tutorials are suitable for either professional or student use The lessons discuss linear static response for problems involving truss plane stress plane strain axisymmetric solid beam and plate structural elements Example problems in heat transfer thermal stress mesh creation and transferring models from CAD solid modelers to ANSYS are also included The tutorials progress from simple to complex Each lesson can be mastered in a short period of time and Lessons 1 through 7 should all be completed to obtain a thorough understanding of basic ANSYS structural analysis

**Engineering Optimization in Design Processes** Hans A. Eschenauer, Claus Mattheck, Niels Olhoff, 2012-12-06 These proceedings contain the texts of 37 contributions presented at the International Conference on Engineering Optimization in an Industrial Environment which took place on 3-4 September 1990 at the Karlsruhe Nuclear Research Center I H Germany The presentations consisted of oral and poster contributions arranged in five sessions Shape and layout optimization Structural optimization with advanced materials Optimal designs with special structural and material behaviour Sensitivity analysis Programme systems Optimization with stability constraints Special problems The editors wish to express their appreciation to all authors and invited speakers for their interesting contributions The proceedings cover a wide range of topics in structural optimization representing the present state of the art in the fields of research and in the industrial environment as well The editors hope that this book will also contribute towards new ideas and concepts in a world of ever decreasing natural resources and ever increasing demands for lighter and yet stronger and safer technical components Finally the editors wish to thank all colleagues who helped in the organisation of the conference especially Mrs E Schroder and Dr K Iethge as well as Mr A von Hagen and Mrs E Haufelder Springer Publishing Company Heidelberg for the good cooperation and help in the publication of these proceedings
