practicing engineers who need to stay abreast of the latest developments in this rapidly evolving field

Laser Processing of Engineering Materials John Ion, 2005-03-22 The complete guide to understanding and using lasers in material processing Lasers are now an integral part of modern society providing extraordinary opportunities for innovation in an ever widening range of material processing and manufacturing applications The study of laser material processing is a core element of many materials and manufacturing courses at undergraduate and postgraduate level As a consequence there is now a vast amount of research on the theory and application of lasers to be absorbed by students industrial researchers practising engineers and production managers Written by an acknowledged expert in the field with over twenty years experience in laser processing John Ion distils cutting edge information and research into a single key text Essential for anyone studying or working with lasers Laser Processing of Engineering Materials provides a clear explanation of the underlying principles including physics chemistry and materials science along with a framework of available laser processes and their distinguishing features and variables This book delivers the knowledge needed to understand and apply lasers to the processing of engineering materials and is highly recommended as a valuable guide to this revolutionary manufacturing technology The first single volume text that treats this core engineering subject in a systematic manner Covers the principles practice and application of lasers in all contemporary industrial processes packed with examples materials data and analysis and modelling techniques

The Theory of Laser Materials Processing John Dowden, 2009-01-06 The purpose of this book is to show how general principles afford insight into laser processes The principles may be from fundamental physical theory or from direct observation but understanding of the general characteristics of a process is essential

Physics of Laser Materials Processing Gennady G. Gladush, Igor Smurov, 2011-08-05 This book describes the basic mechanisms theory simulations and technological aspects of Laser processing techniques It covers the principles of laser quenching welding cutting alloying selective sintering ablation etc The main attention is paid to the quantitative description The diversity and complexity of technological and physical processes is discussed using a unitary approach The book aims on understanding the cause and effect relations in physical processes in Laser technologies It will help researchers and engineers to improve the existing and develop new Laser machining techniques The book addresses readers with a certain background in general physics and mathematical analysis graduate students researchers and engineers practicing laser applications

Laser Materials Processing Michael Bass, 2012-12-02 Laser Materials Processing aims to introduce lasers and laser systems to the newcomers to laser terminology and to provide enough background material on lasers to reduce one's hesitation to employ these devices The book covers the use of lasers in materials processing including its application in cutting and welding as well as the principles behind them laser heat treatment rapid solidification laser processing at high power density shaping of materials using lasers and laser processing of semiconductors The selection also covers considerations in laser manufacturing and a survey in laser applications The text is recommended for both experienced laser users engineers or

scientists yet unfamiliar with the subject The book is also recommended for those who wish to know about the importance of lasers in the field of materials processing as the bulk of the book is devoted to the discussions of some of the most important materials processing activities in use or under development

The Theory of Laser Materials Processing John Dowden, Wolfgang Schulz, 2017-06-16 The revised edition of this important reference volume presents an expanded overview of the analytical and numerical approaches employed when exploring and developing modern laser materials processing techniques The book shows how general principles can be used to obtain insight into laser processes whether derived from fundamental physical theory or from direct observation of experimental results The book gives readers an understanding of the strengths and limitations of simple numerical and analytical models that can then be used as the starting point for more elaborate models of specific practical theoretical or commercial value Following an introduction to the mathematical formulation of some relevant classes of physical ideas the core of the book consists of chapters addressing key applications in detail cutting keyhole welding drilling arc and hybrid laser arc welding hardening cladding and forming The second edition includes a new a chapter on glass cutting with lasers as employed in the display industry A further addition is a chapter on meta modelling whose purpose is to construct fast simple and reliable models based on appropriate sources of information It then makes it easy to explore data visually and is a convenient interactive tool for scientists to improve the quality of their models and for developers when designing their processes As in the first edition the book ends with an updated introduction to comprehensive numerical simulation Although the book focuses on laser interactions with materials many of the principles and methods explored can be applied to thermal modelling in a variety of different fields and at different power levels It is aimed principally however at academic and industrial researchers and developers in the field of laser technology

Laser Processing of Materials Peter Schaaf, 2010-07-28 Laser materials processing has made tremendous progress and is now at the forefront of industrial and medical applications The book describes recent advances in smart and nanoscaled materials going well beyond the traditional cutting and welding applications As no analytical methods are described the examples are really going into the details of what nowadays is possible by employing lasers for sophisticated materials processing giving rise to achievements not possible by conventional materials processing
